

Climbing up the Scaling Ladder

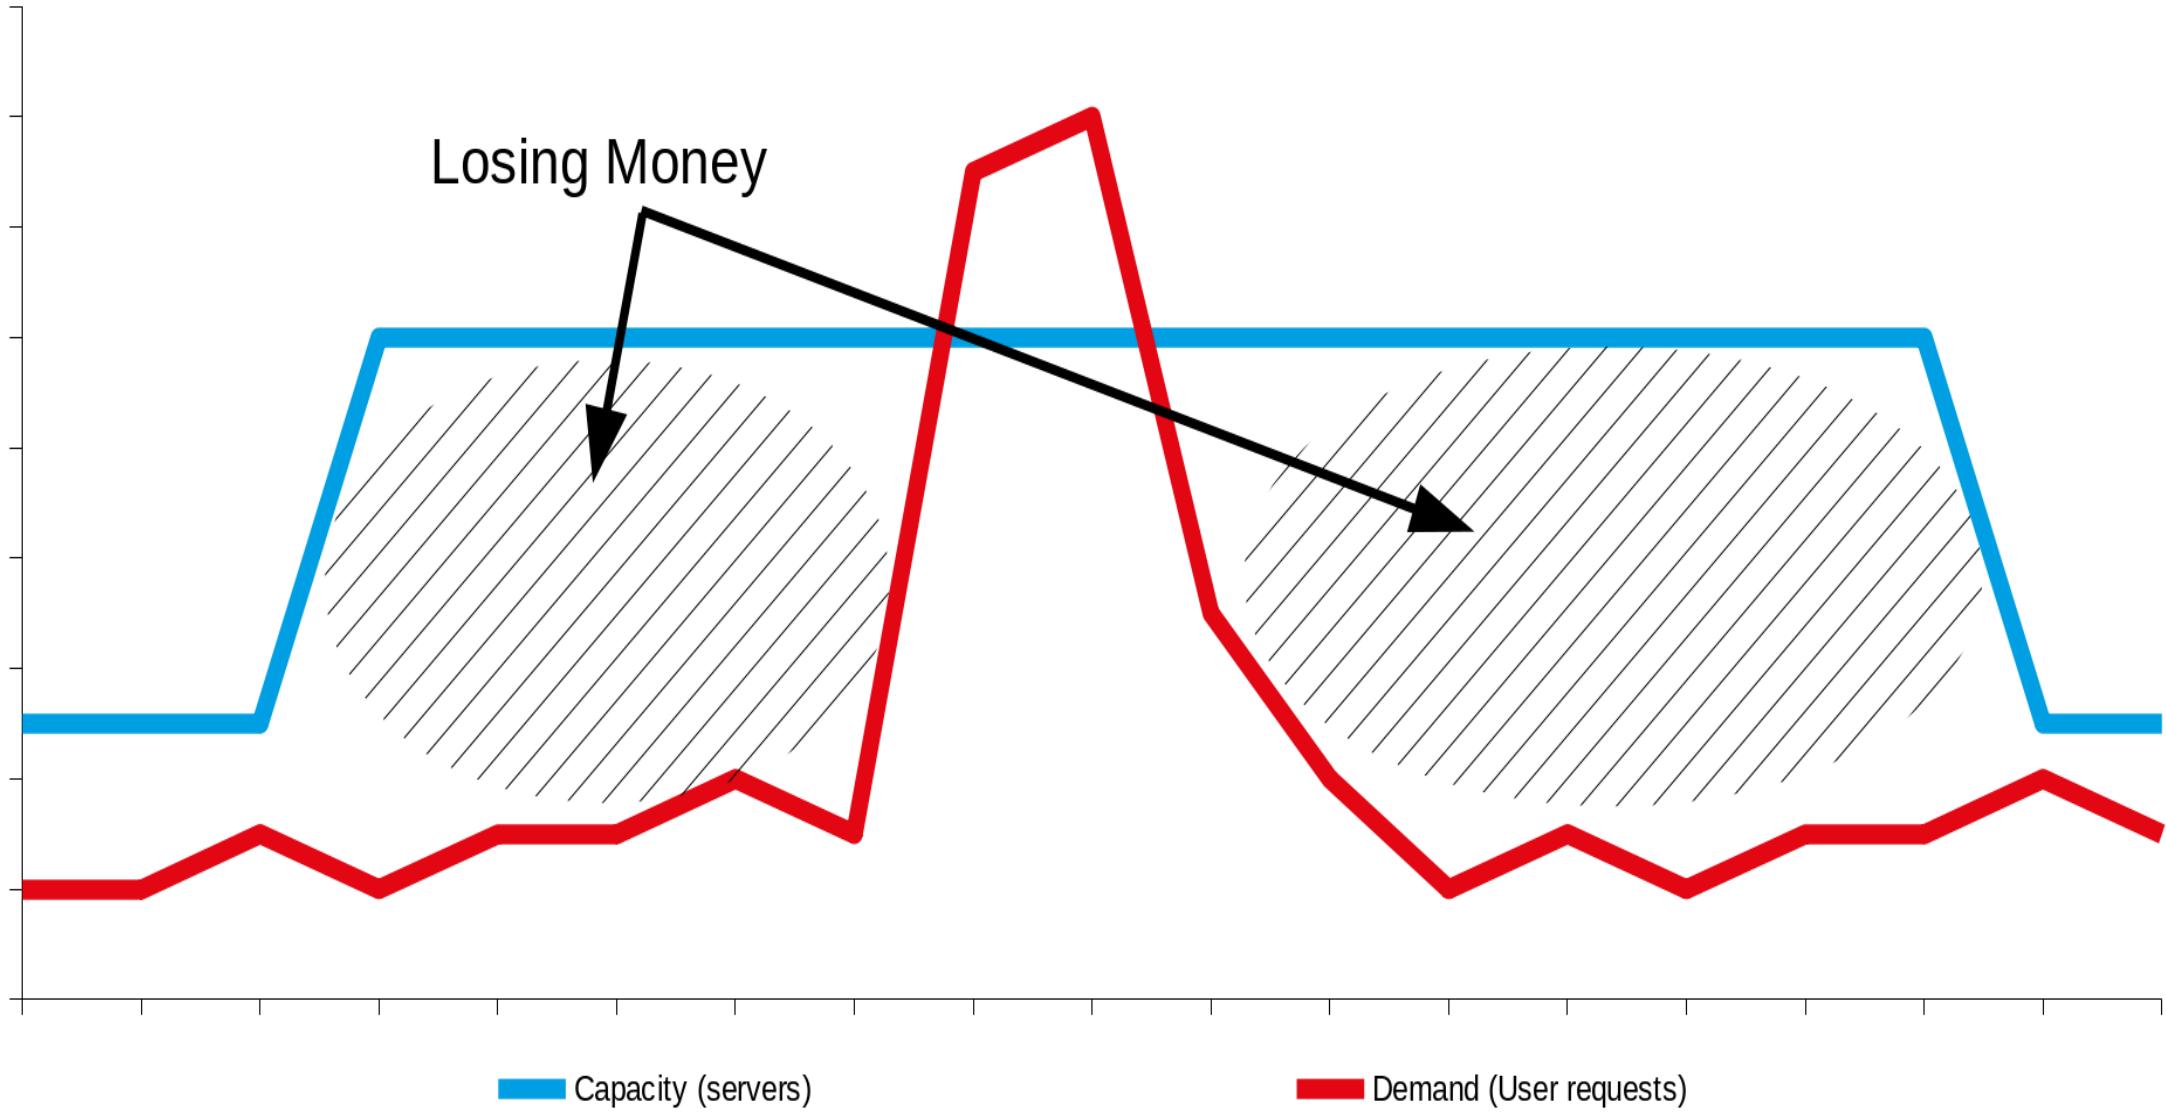

Problem Statement

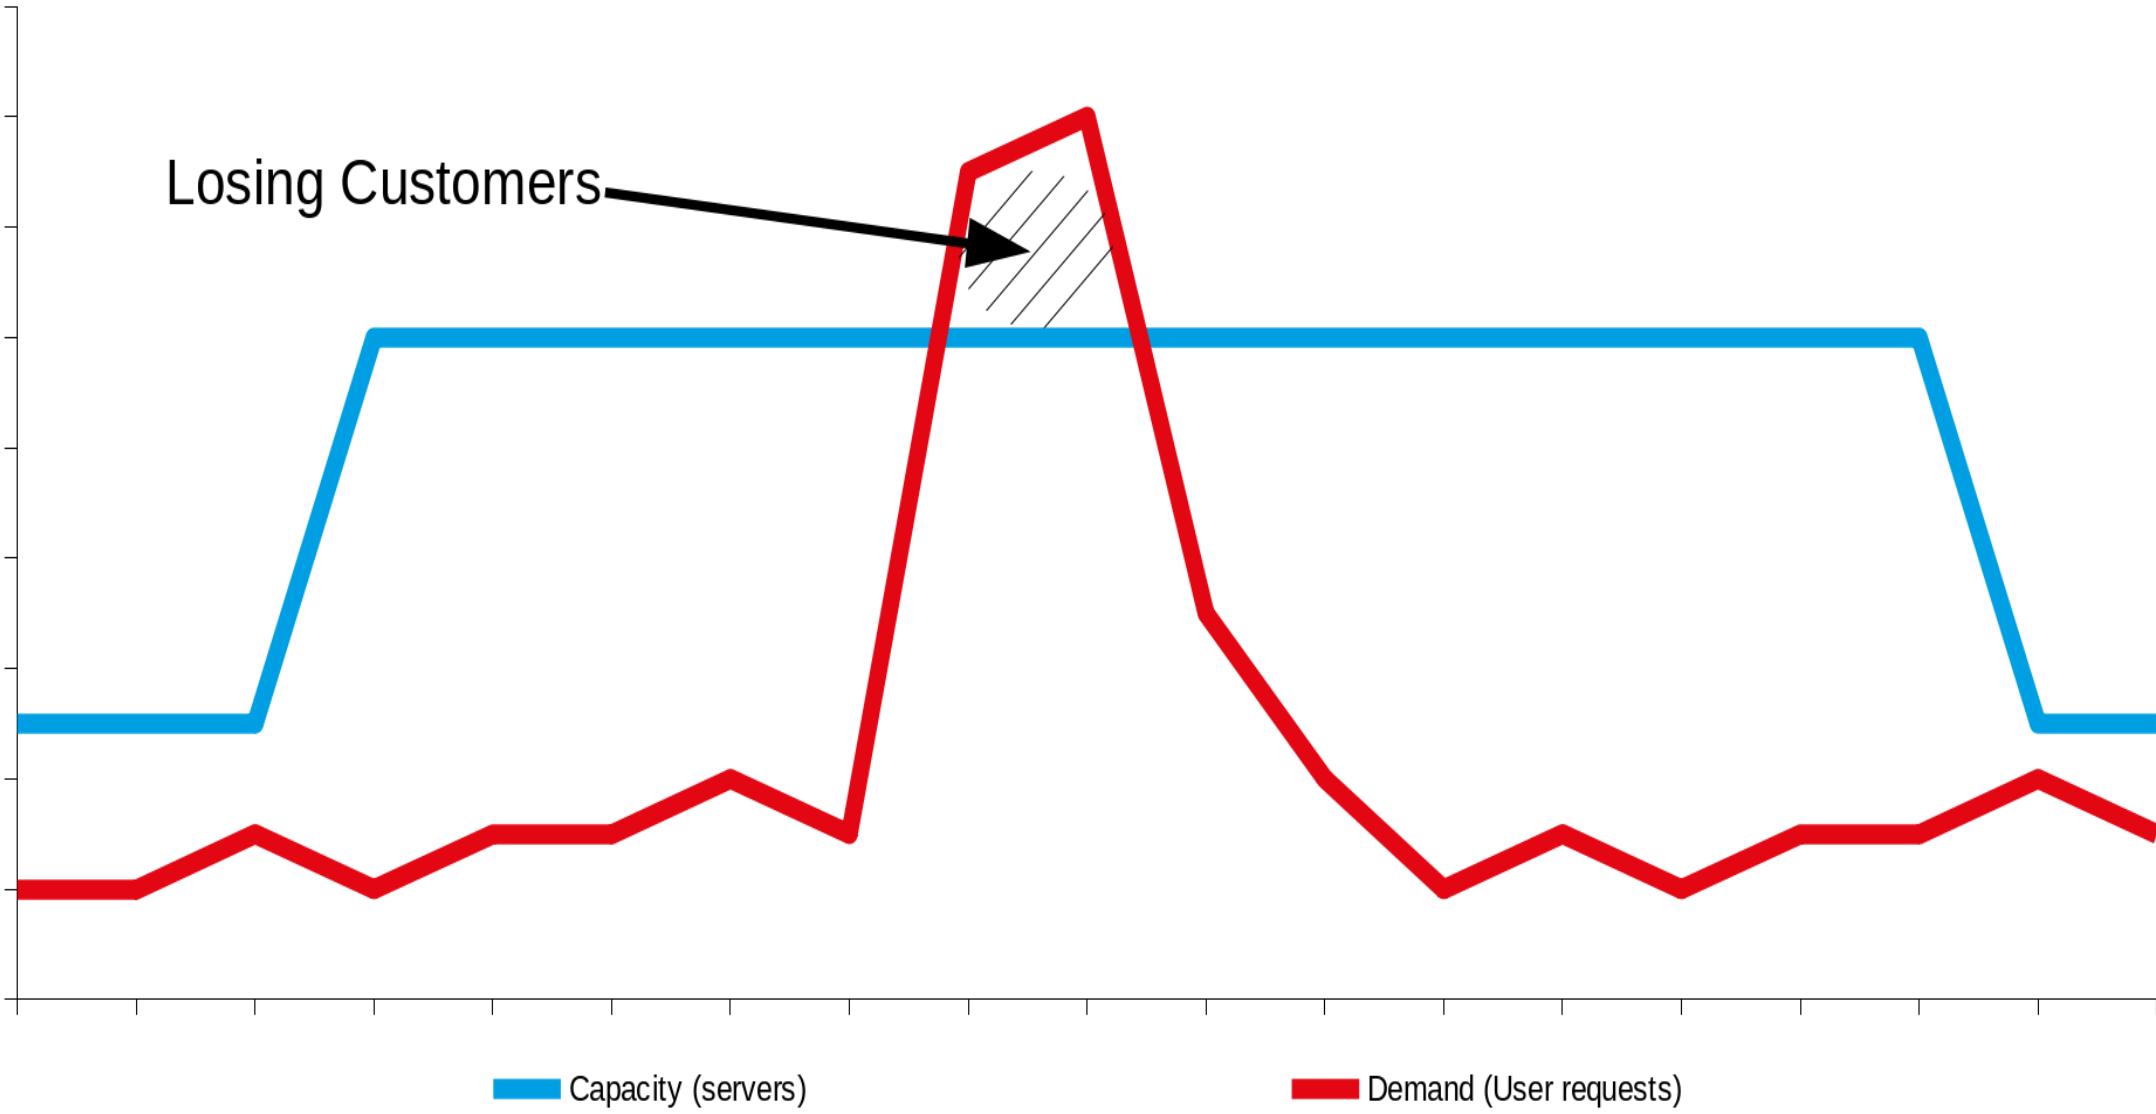

With inappropriate scaling you are losing
customers  and money .

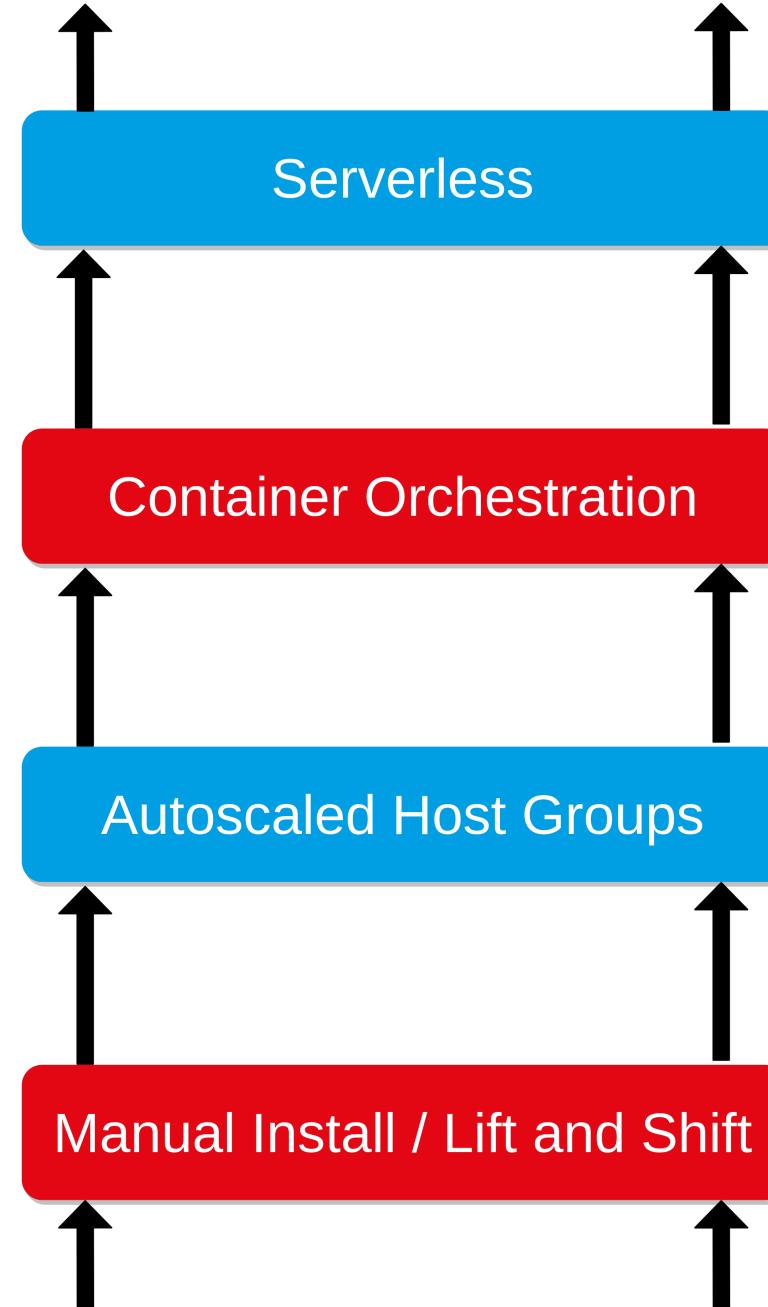

Lift and Shift

- Migrate legacy VMs / Software with (almost) no modification
- Doesn't scale very well (bigger VMs, faster disks)
- Your mess for less
- Conclusion: don't do it (in most cases)

Autoscaled Host Groups

- Lift and Shift done right
- Paradigm shift: VMs are containers
- Make infrastructure immutable
- Persist data outside VM

Example Autoscaled Host Groups

- VM Image

HashiCorp
Packer

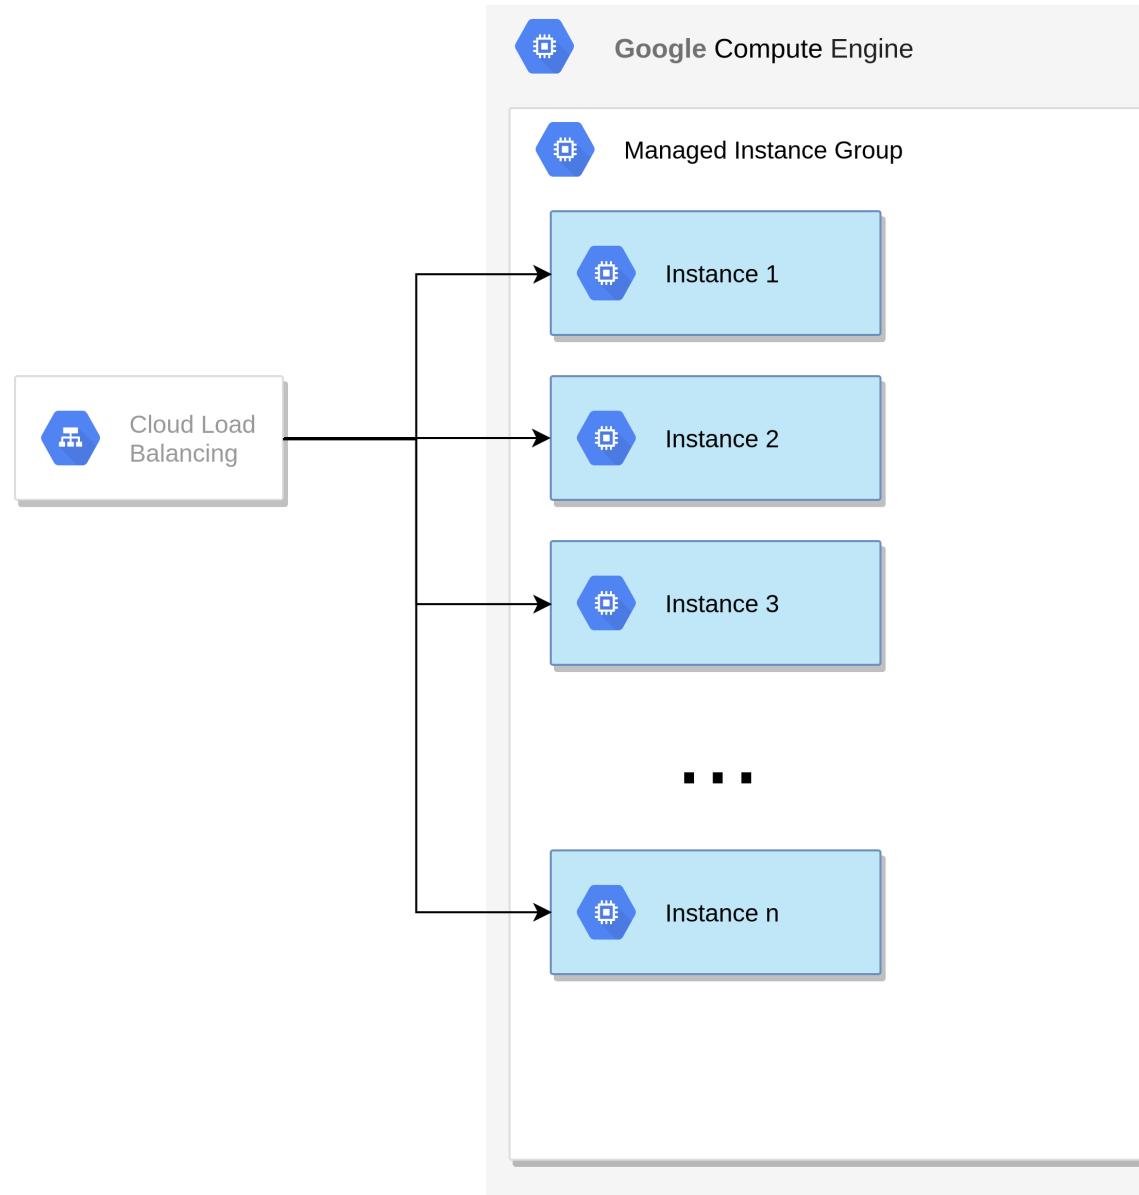

- Managed Instance Group -> VM Autoscaler

HashiCorp
Terraform

- VM Template
- Managed instance group
- Loadbalancer

Managed Instance Group in GCP

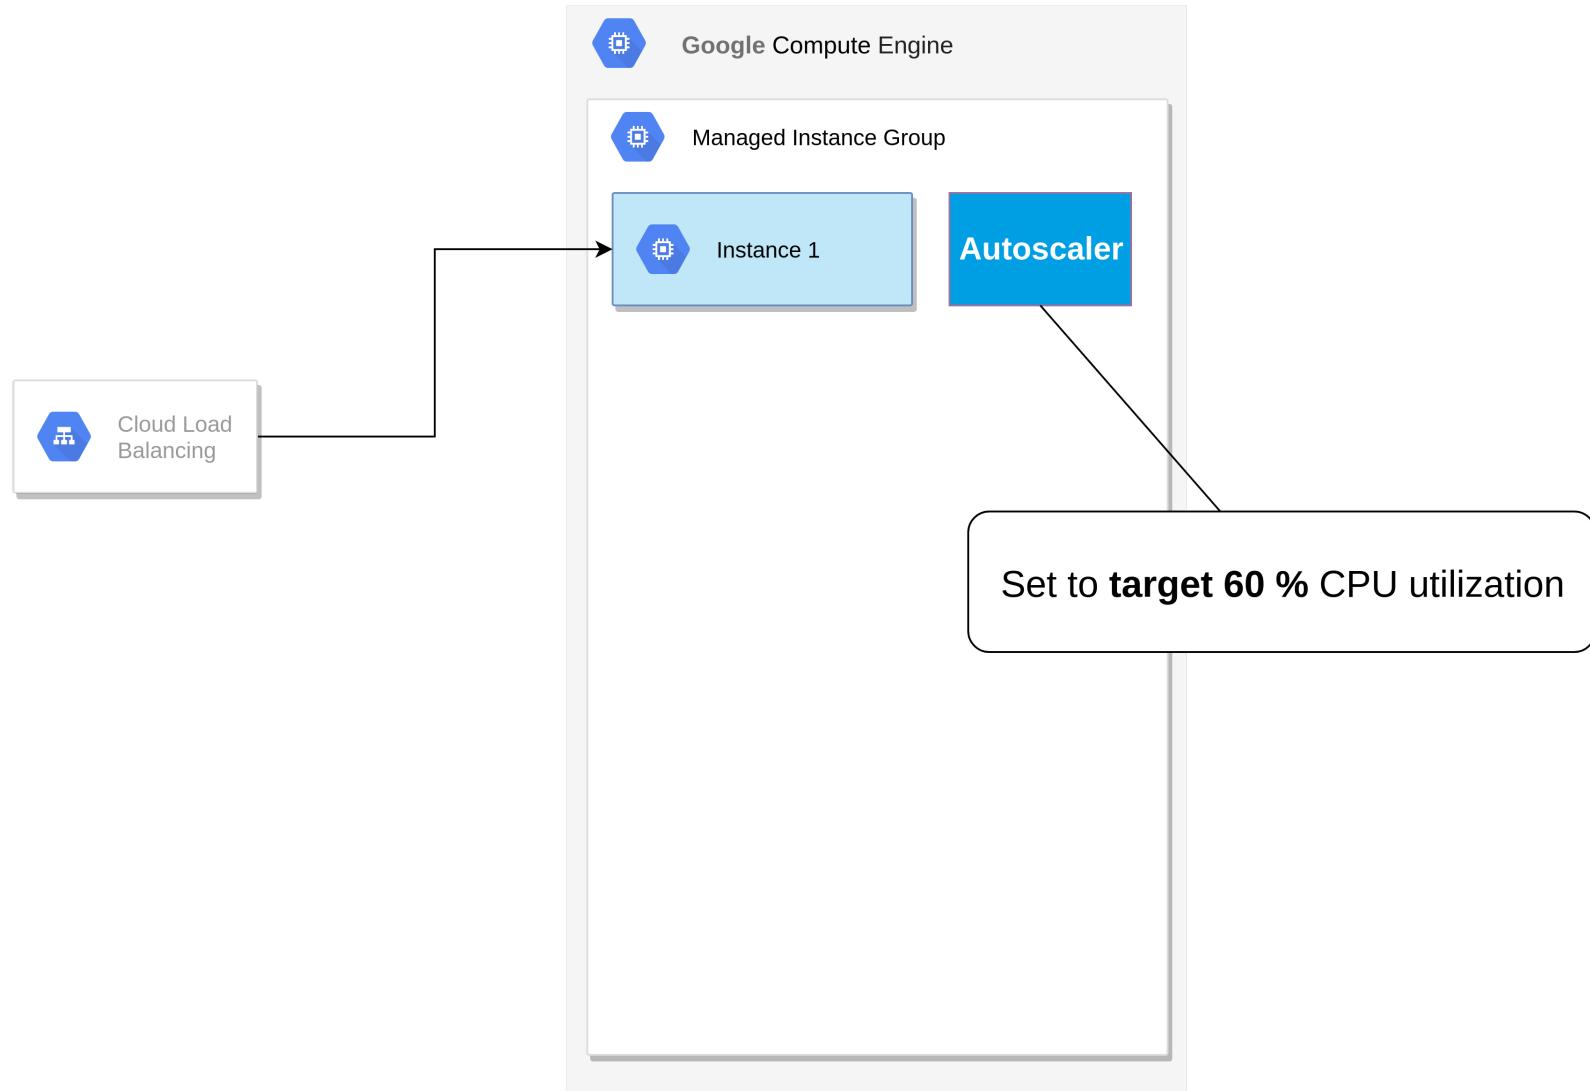

Example Application

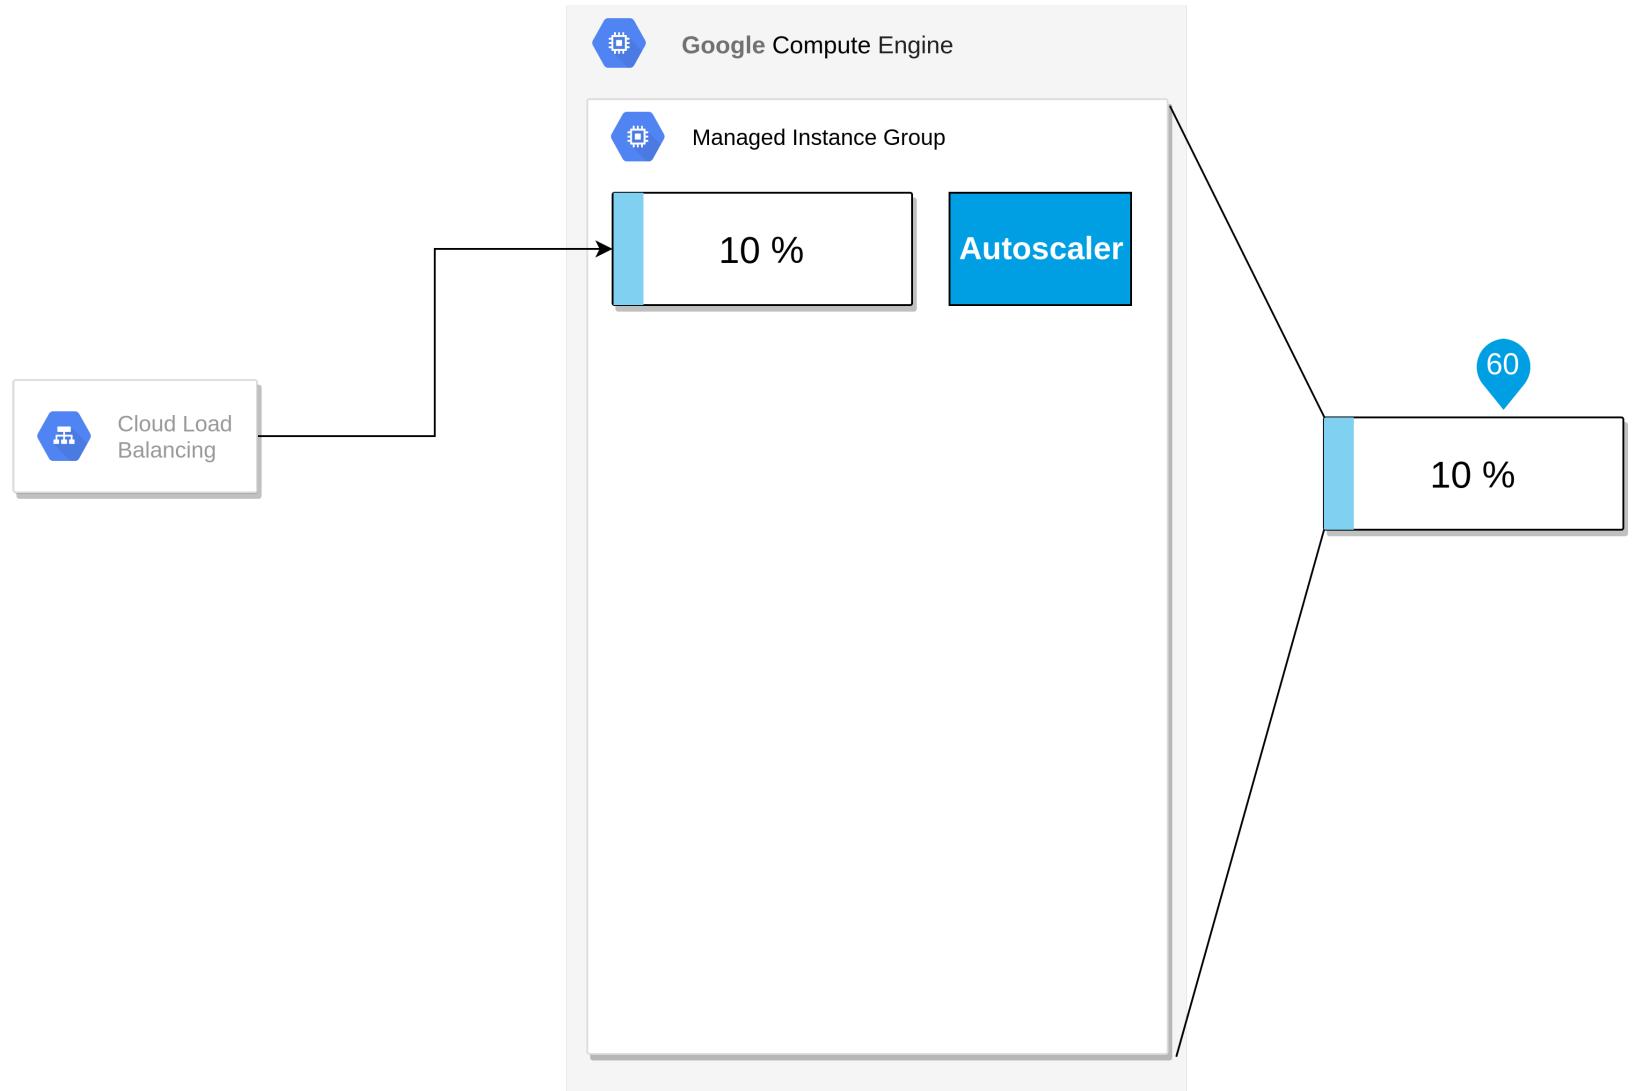

- Hashy

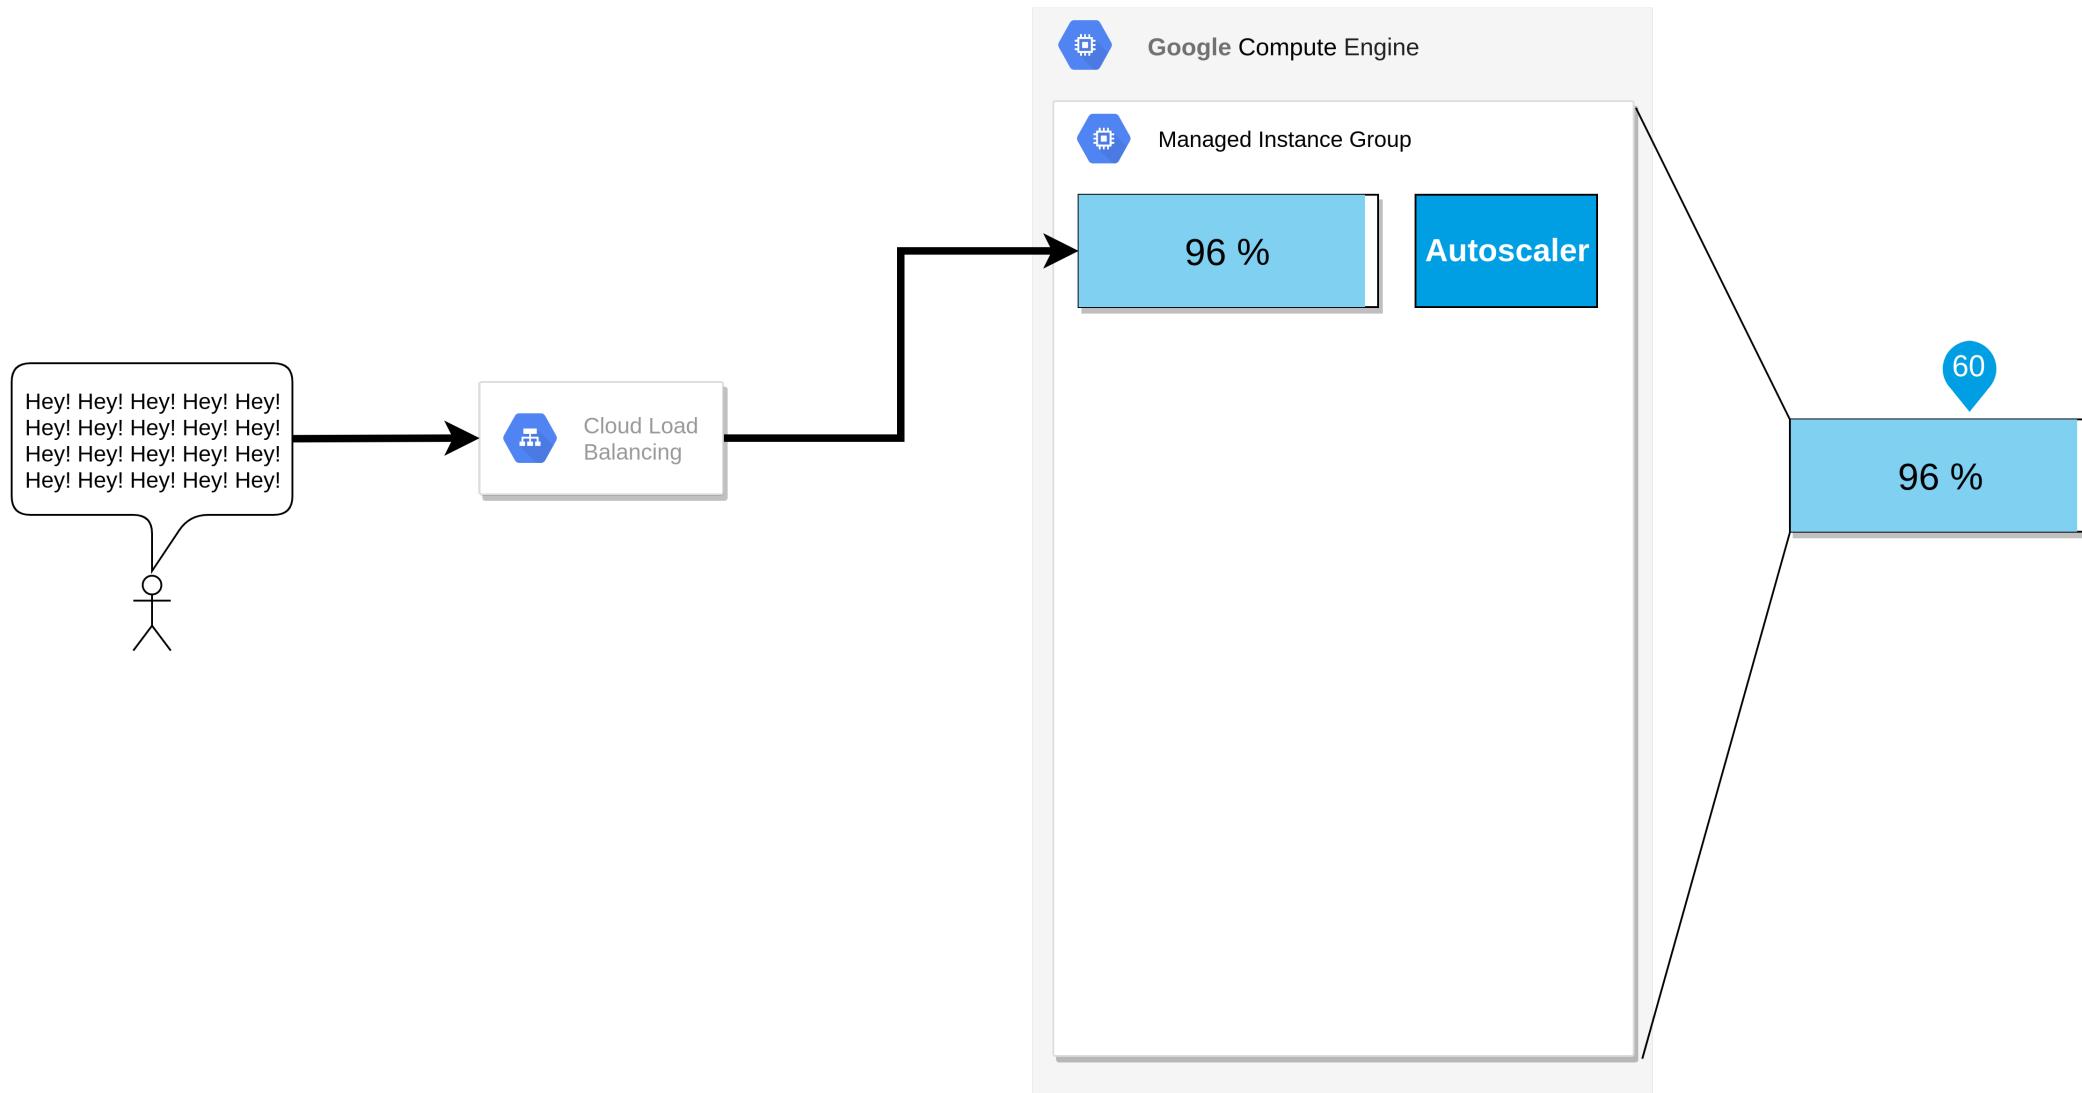

```
bcrypt( data=time.now(), cost=12 )
```

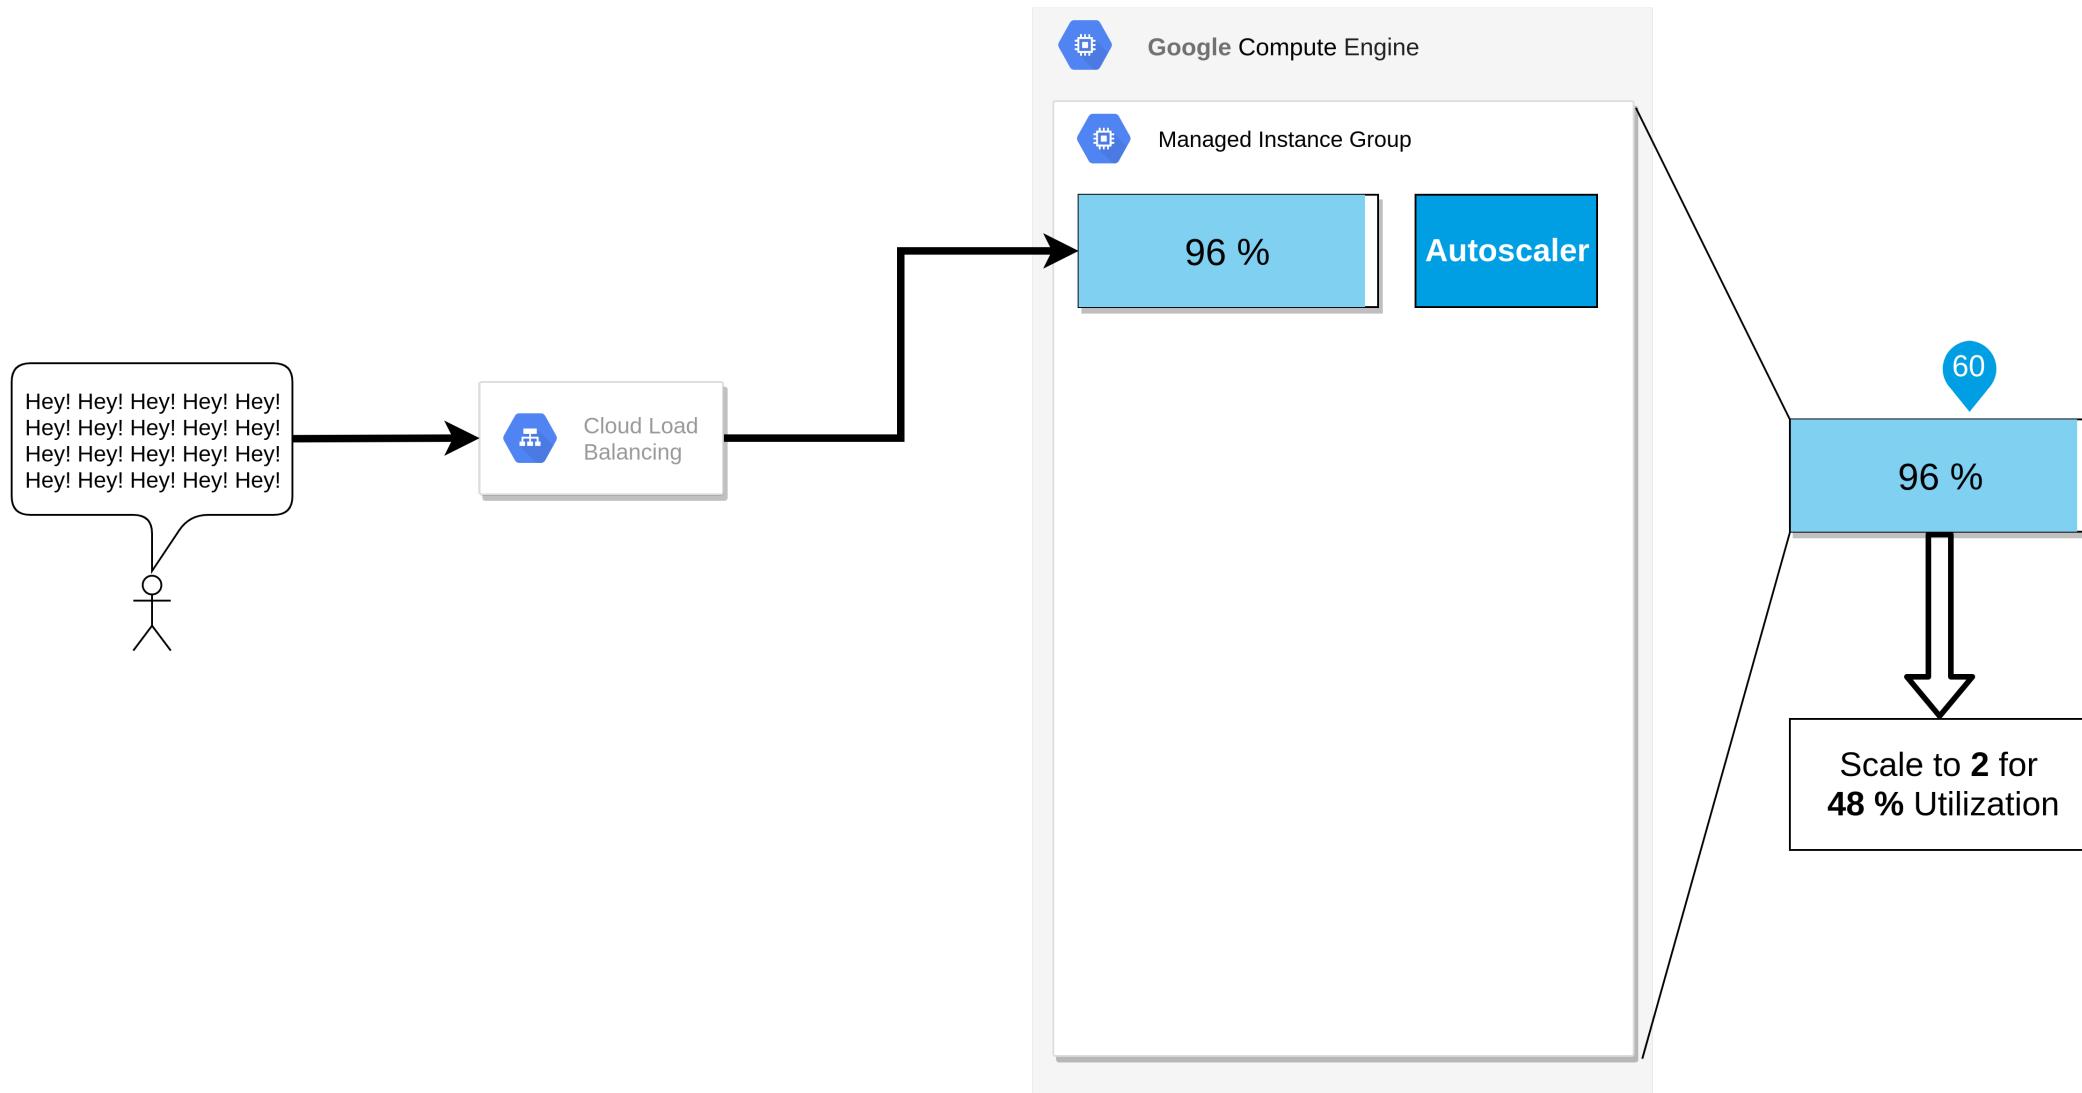

Demo Managed Instance Group Part 1

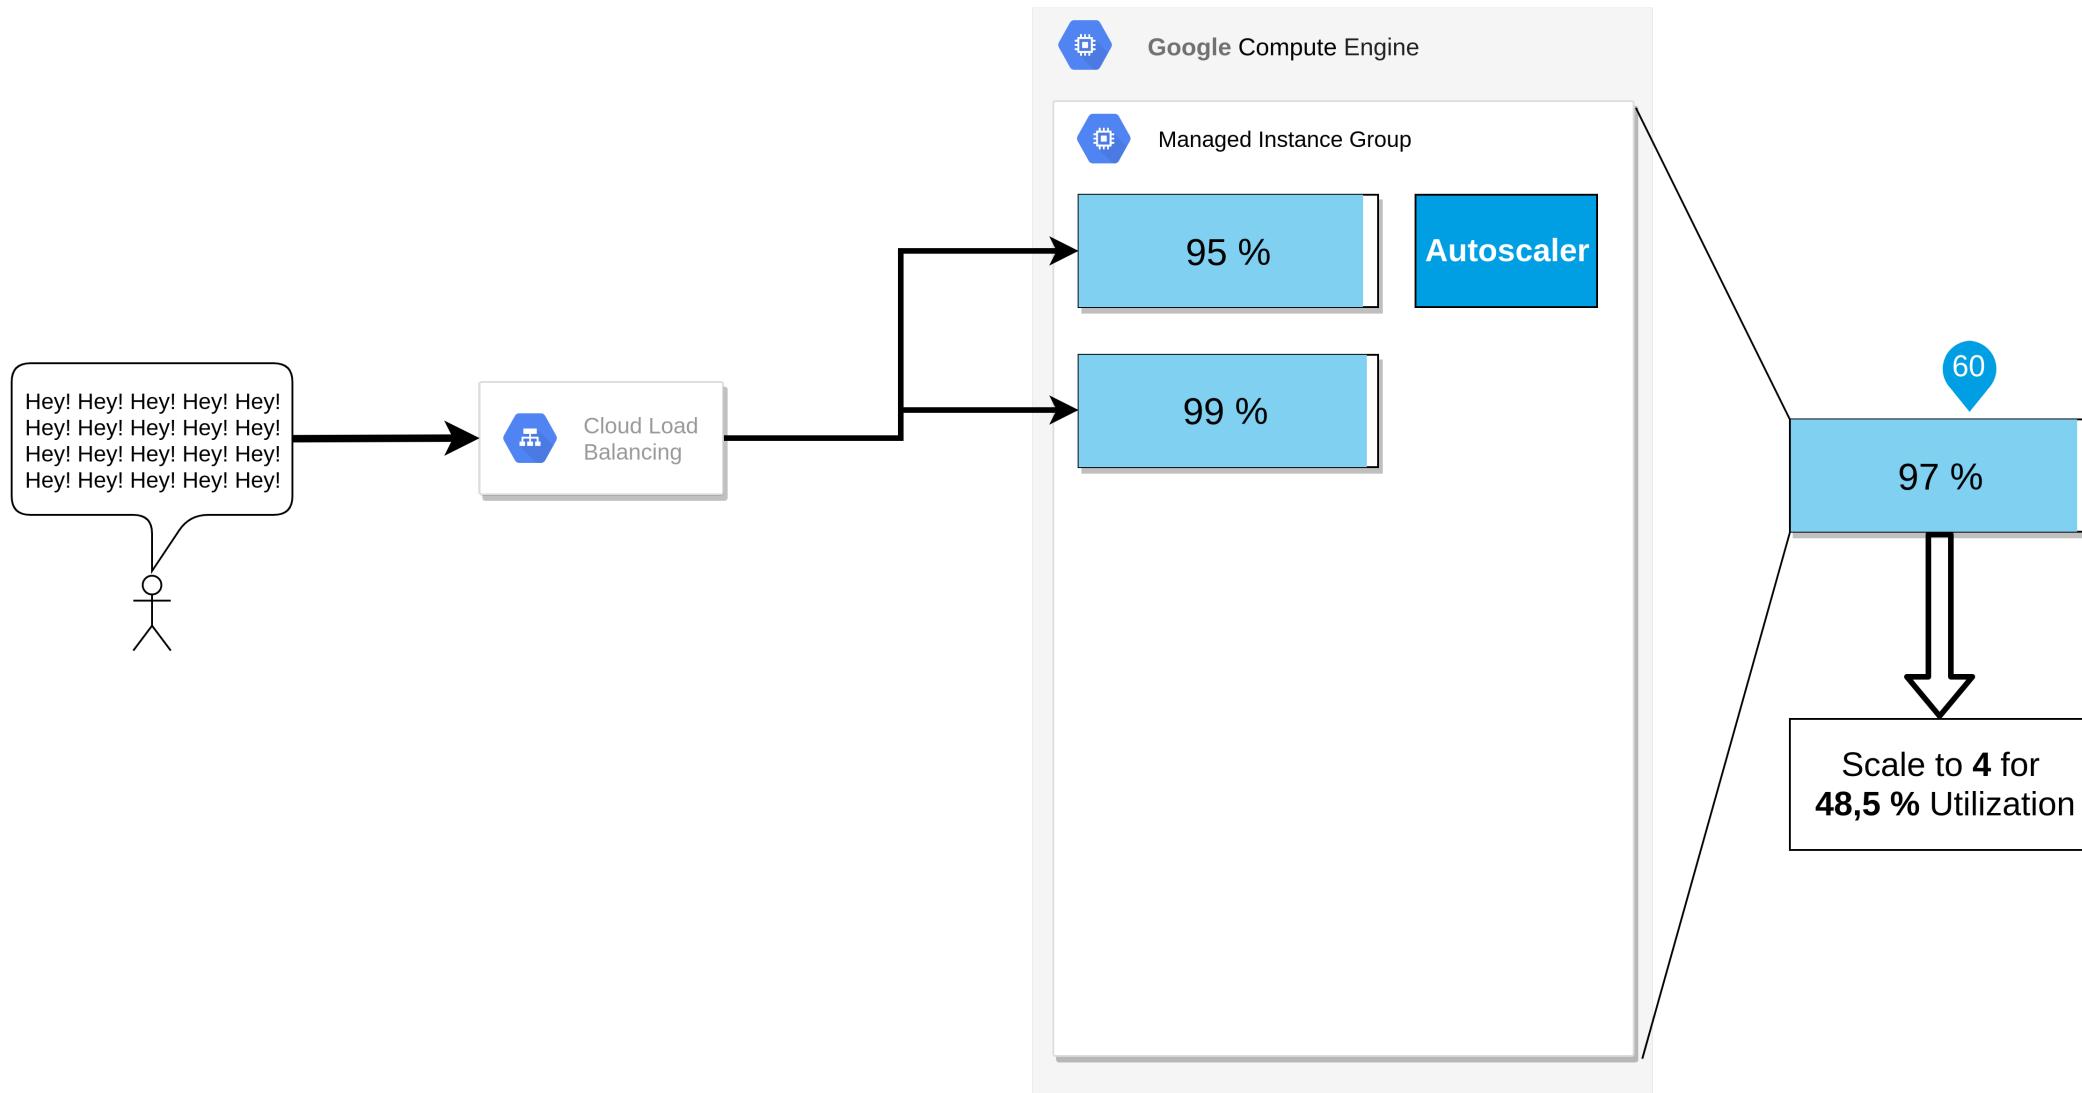

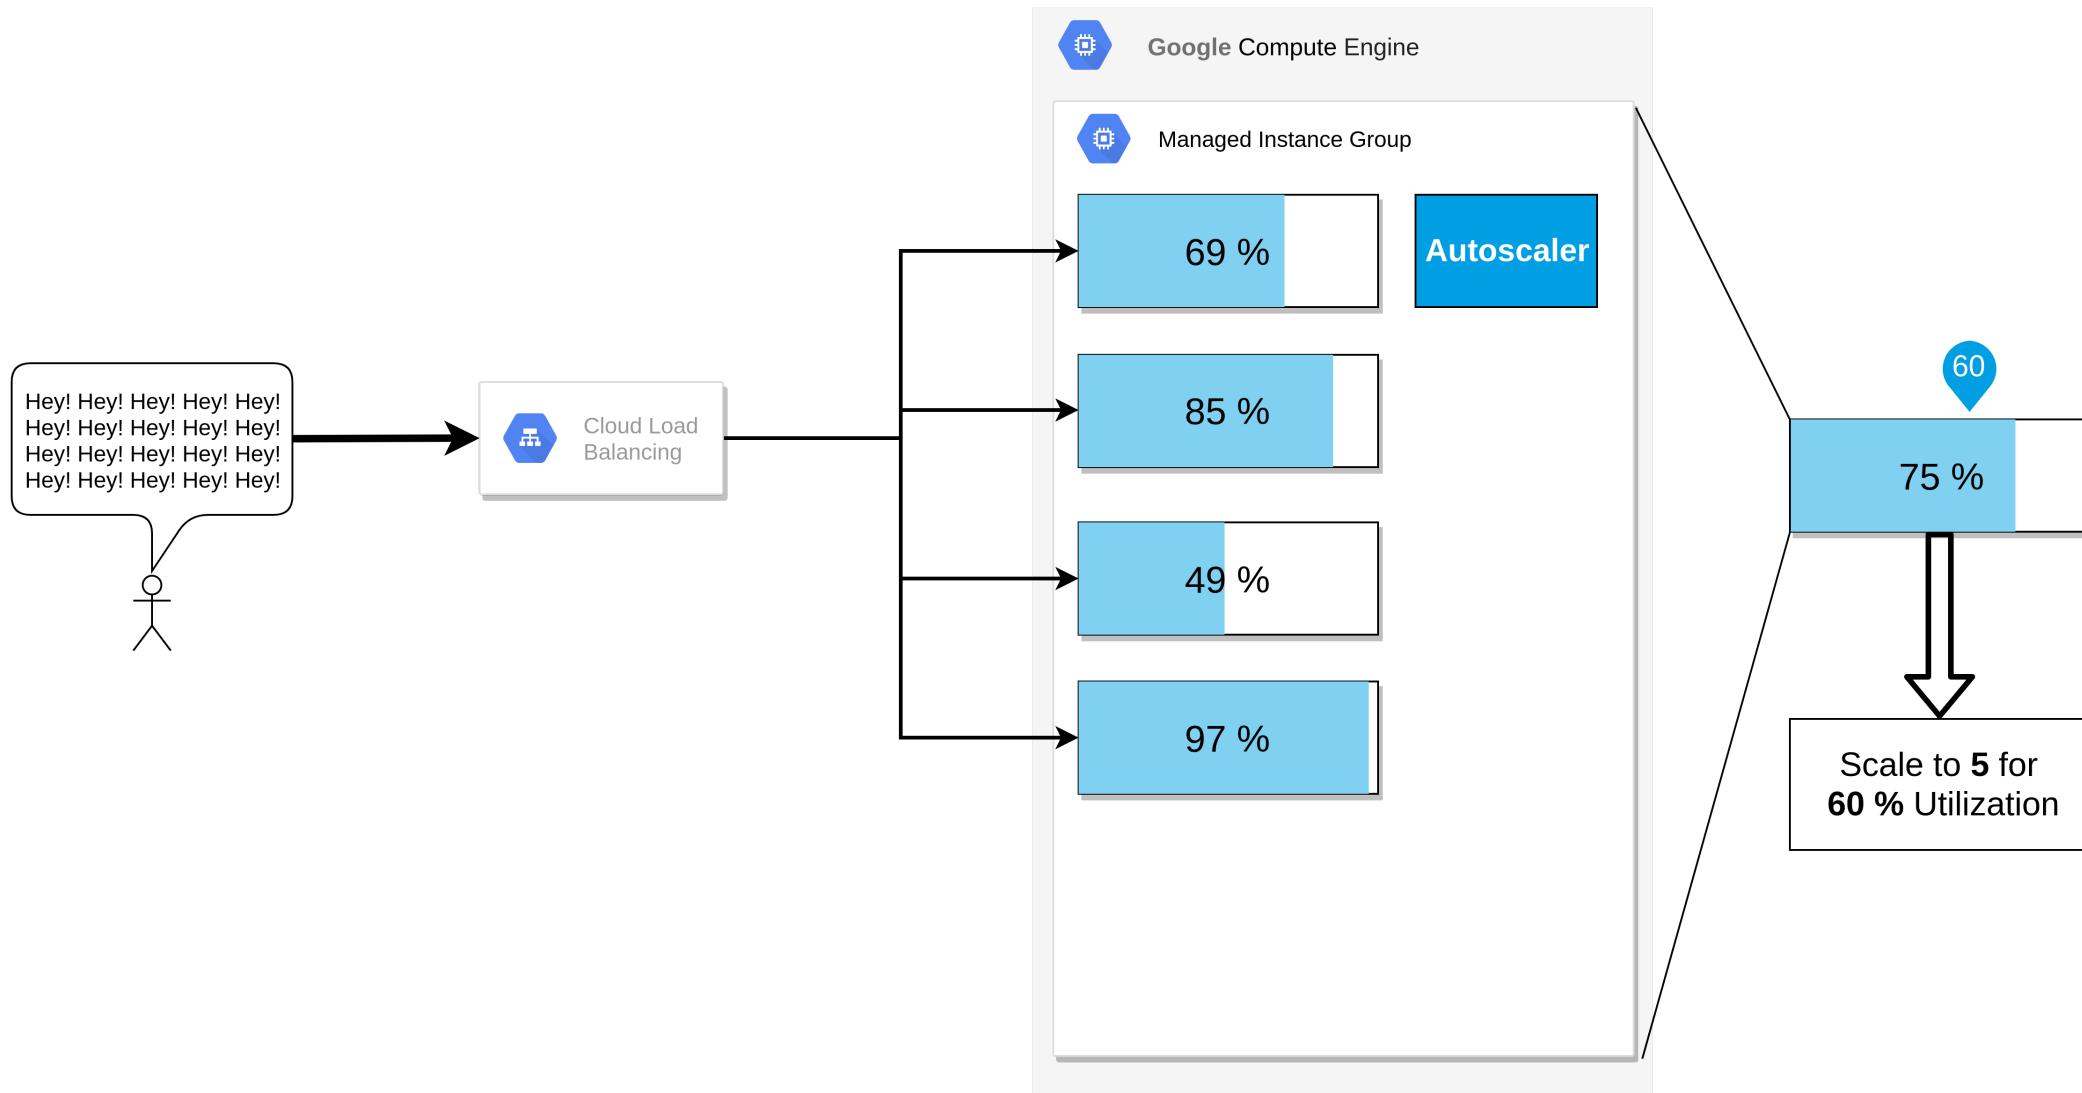

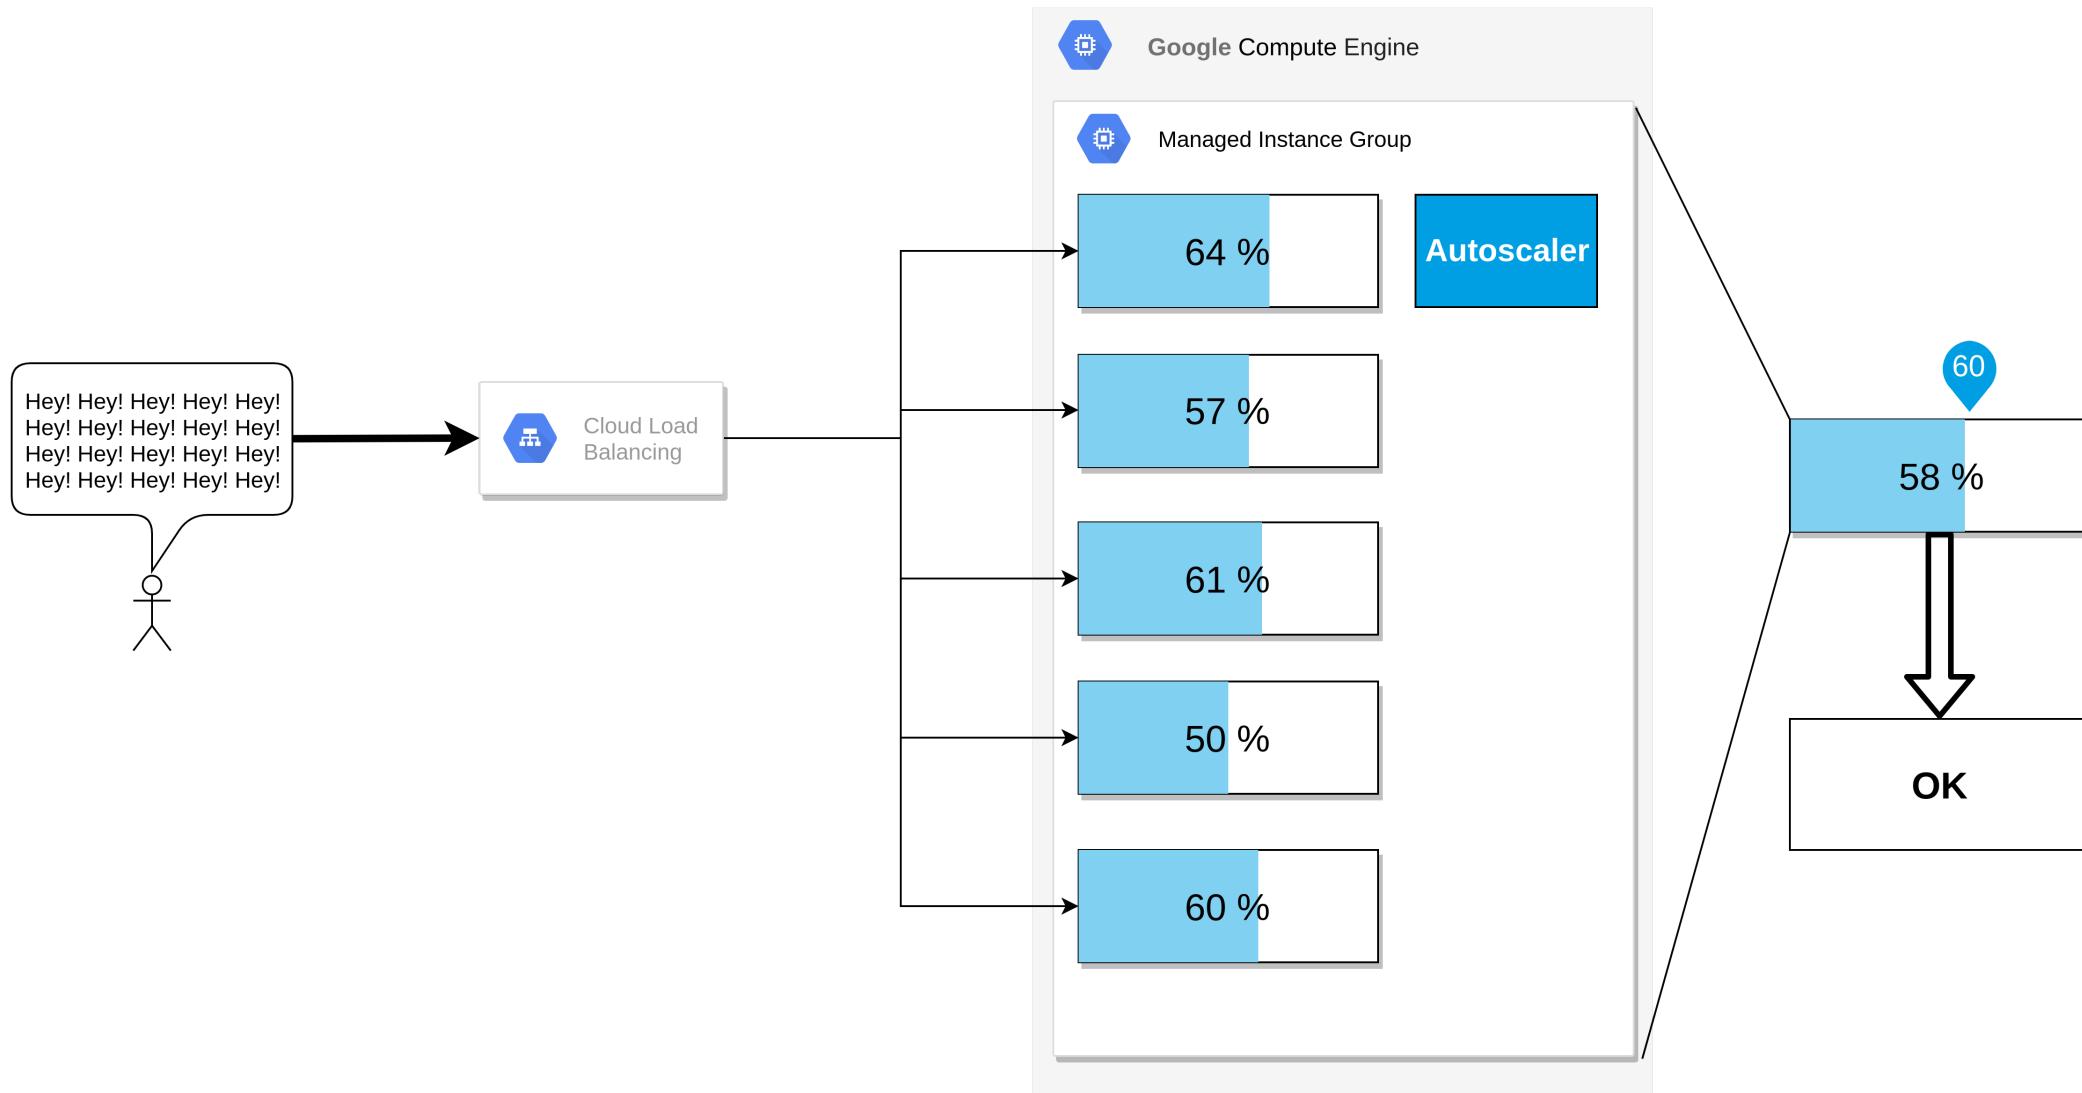

Demo Managed Instance Group Part 2

Container Orchestration

- Paradigm shift: There are no VMs
- Pool of resources
- Services containerized

Example Container Orchestration

- Kubernetes Cluster
- Node Autoscaler

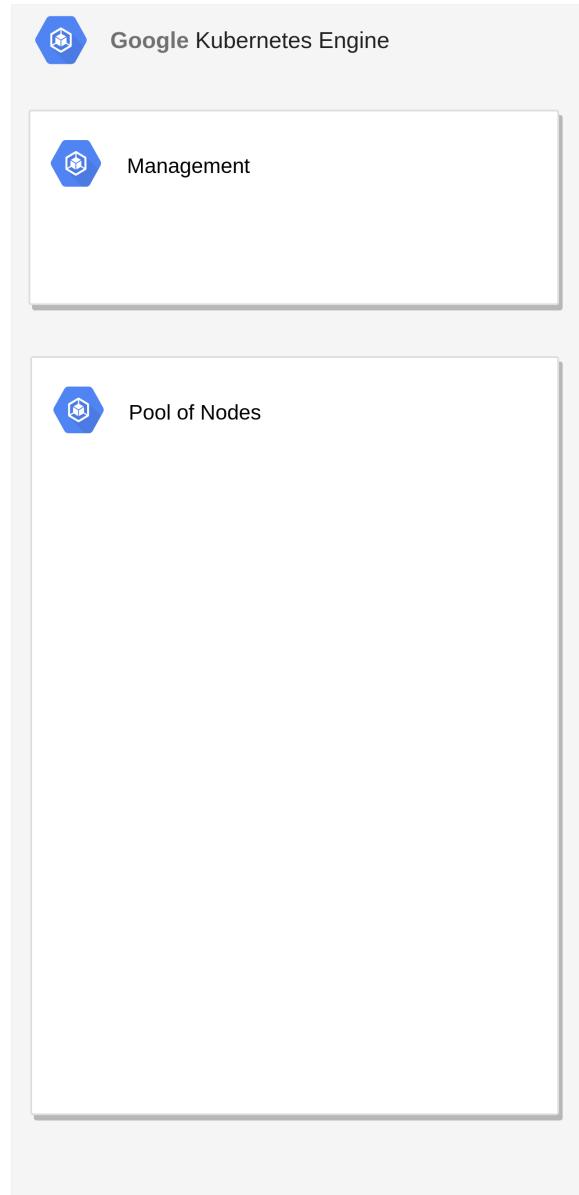

- Container Image

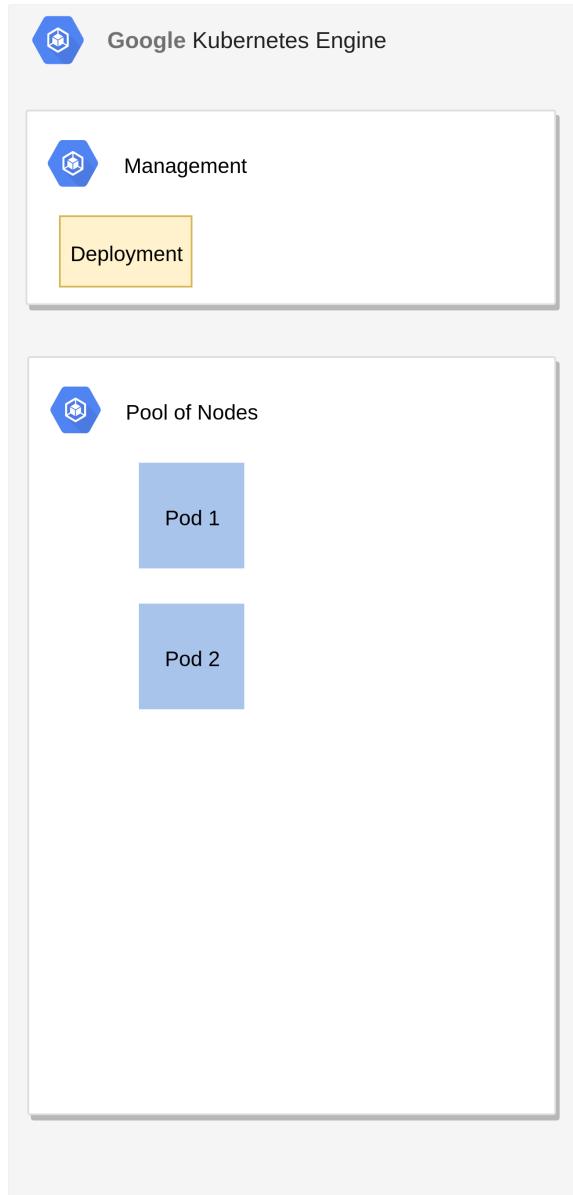

- Deployment
- Horizontal Pod Autoscaler
- Service

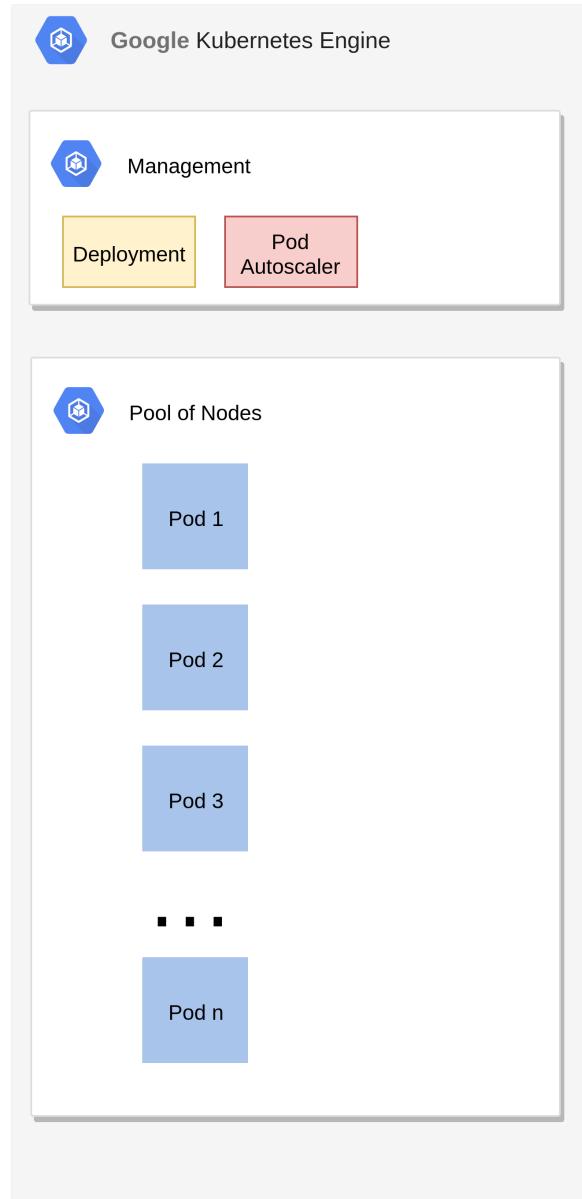

Kubernetes cluster

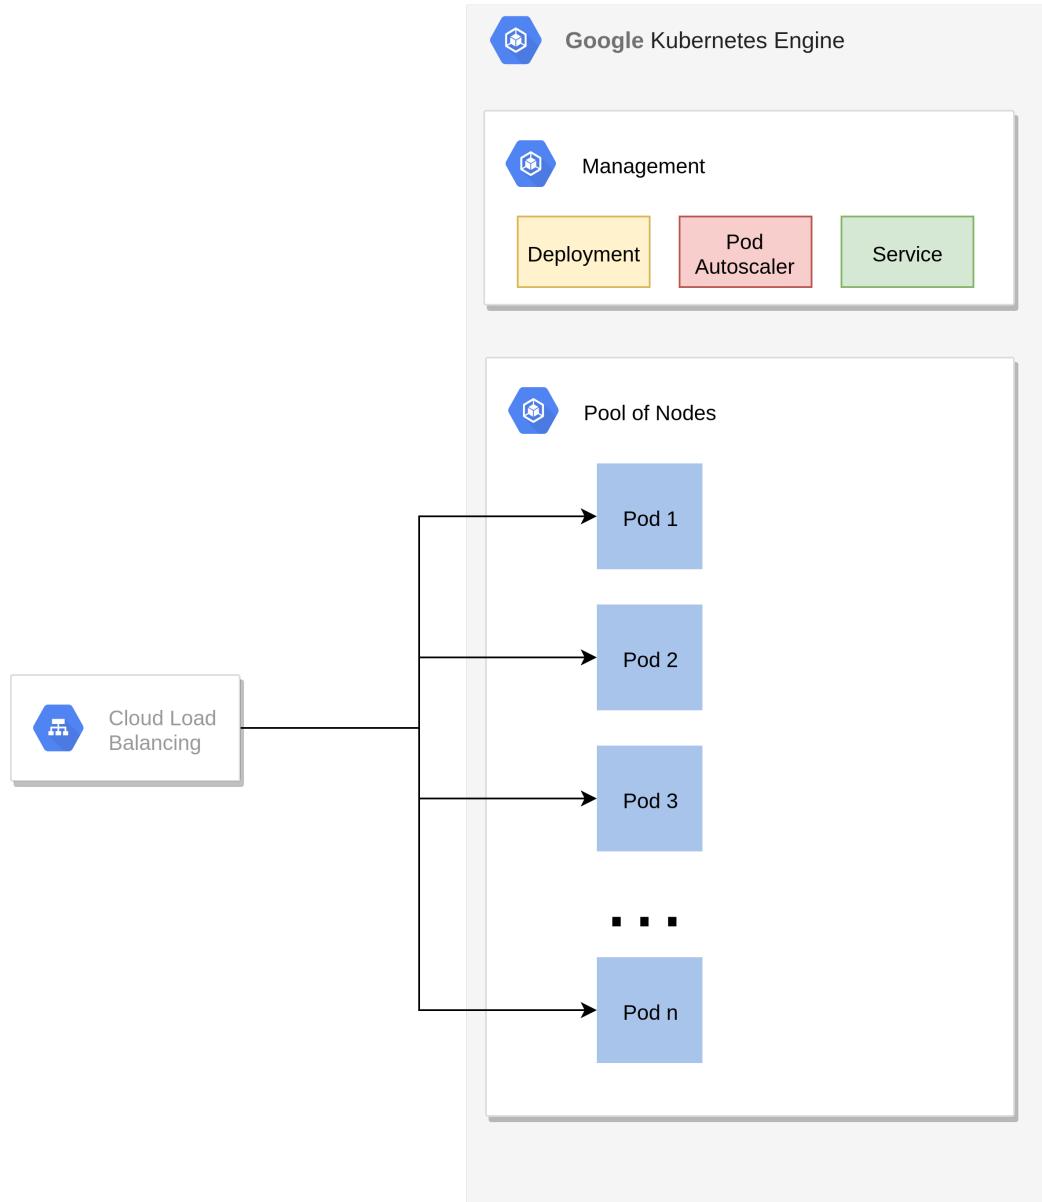

Kubernetes Deployment

Kubernetes Pod Autoscaler

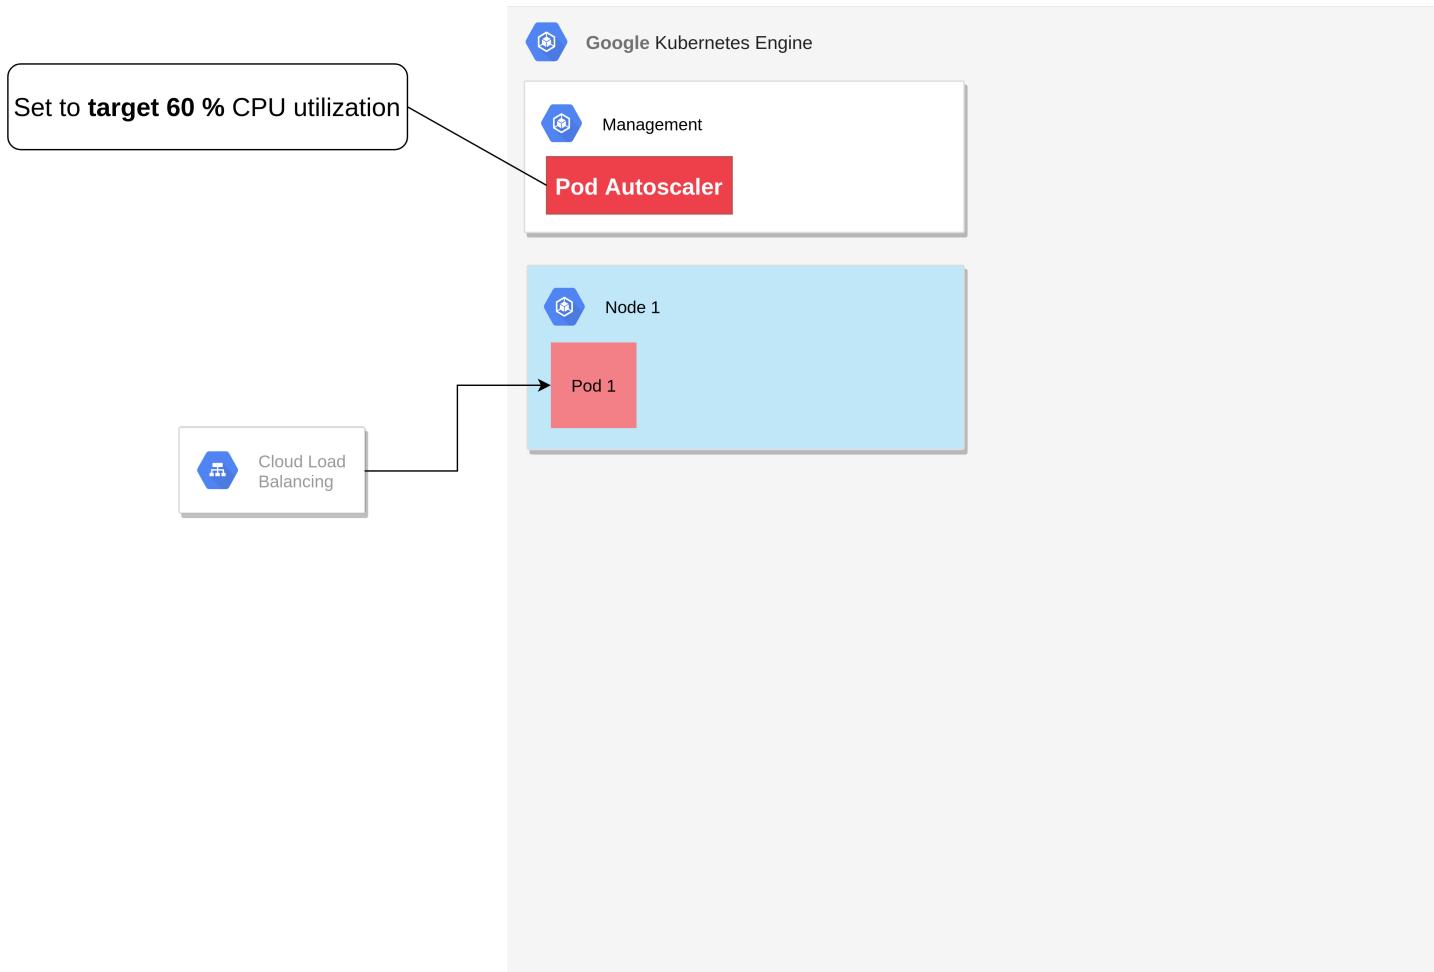

Kubernetes Service

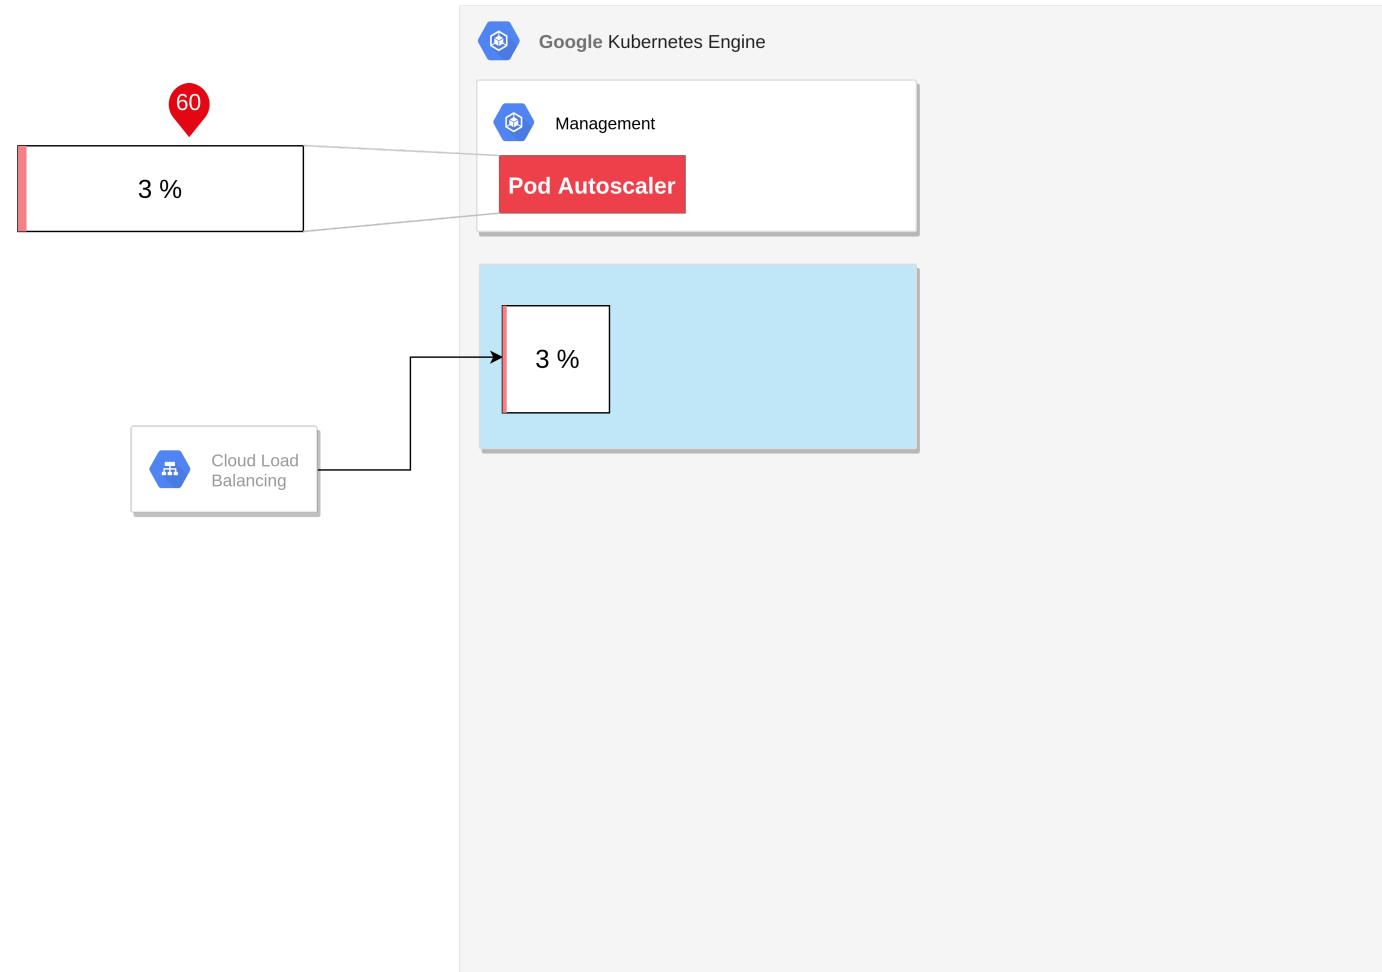

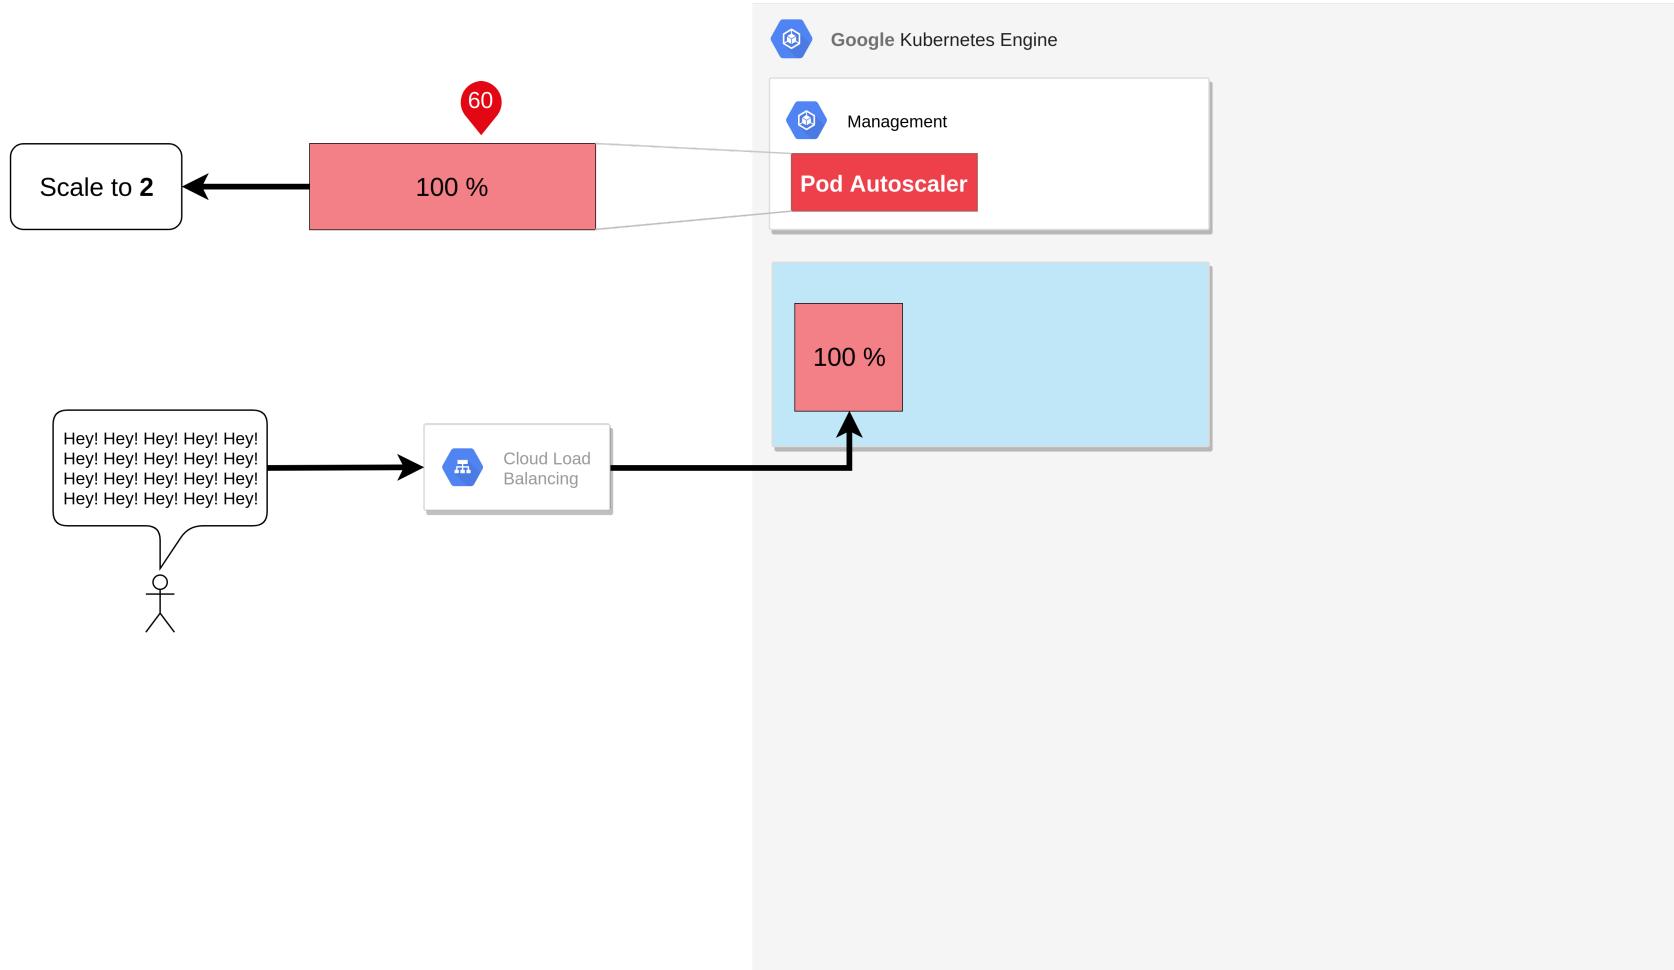

Demo Kubernetes

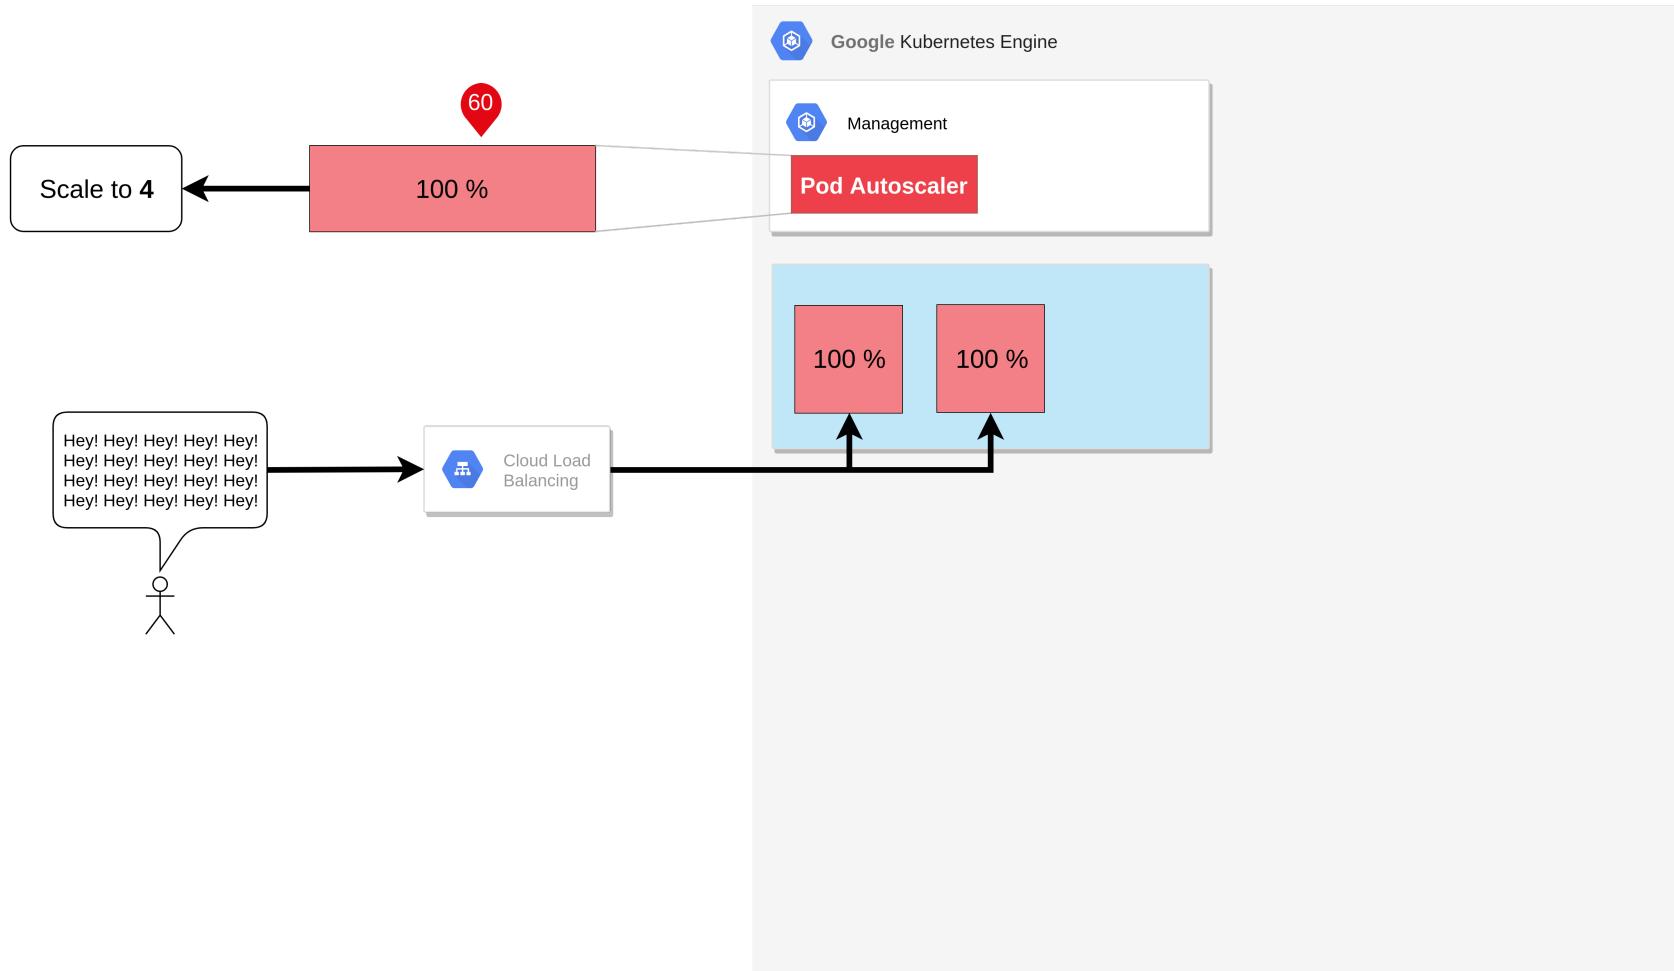

Part 1

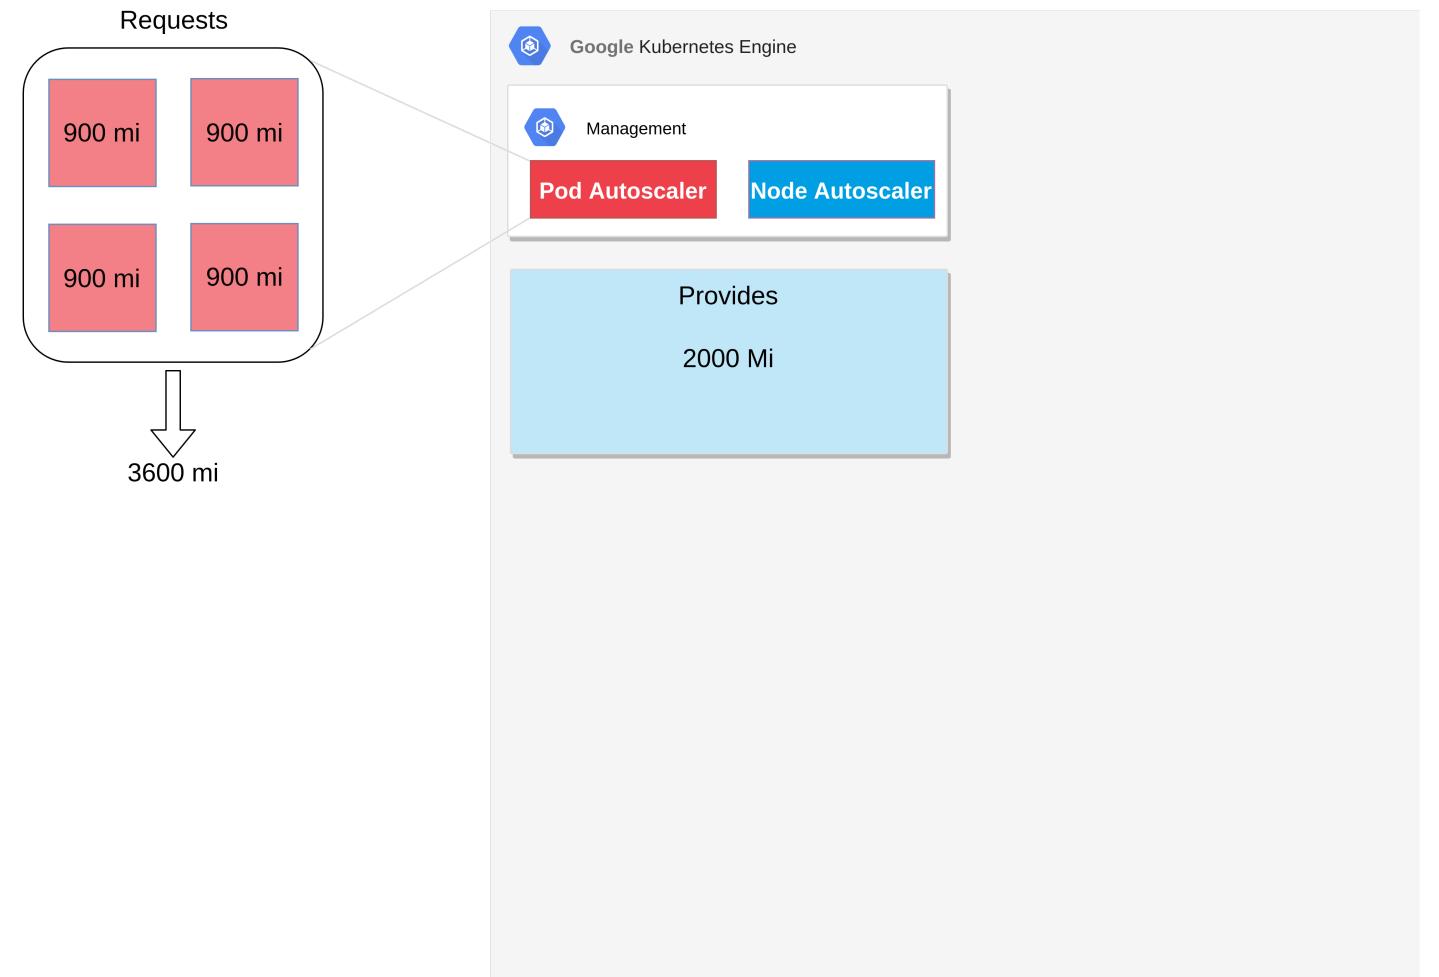

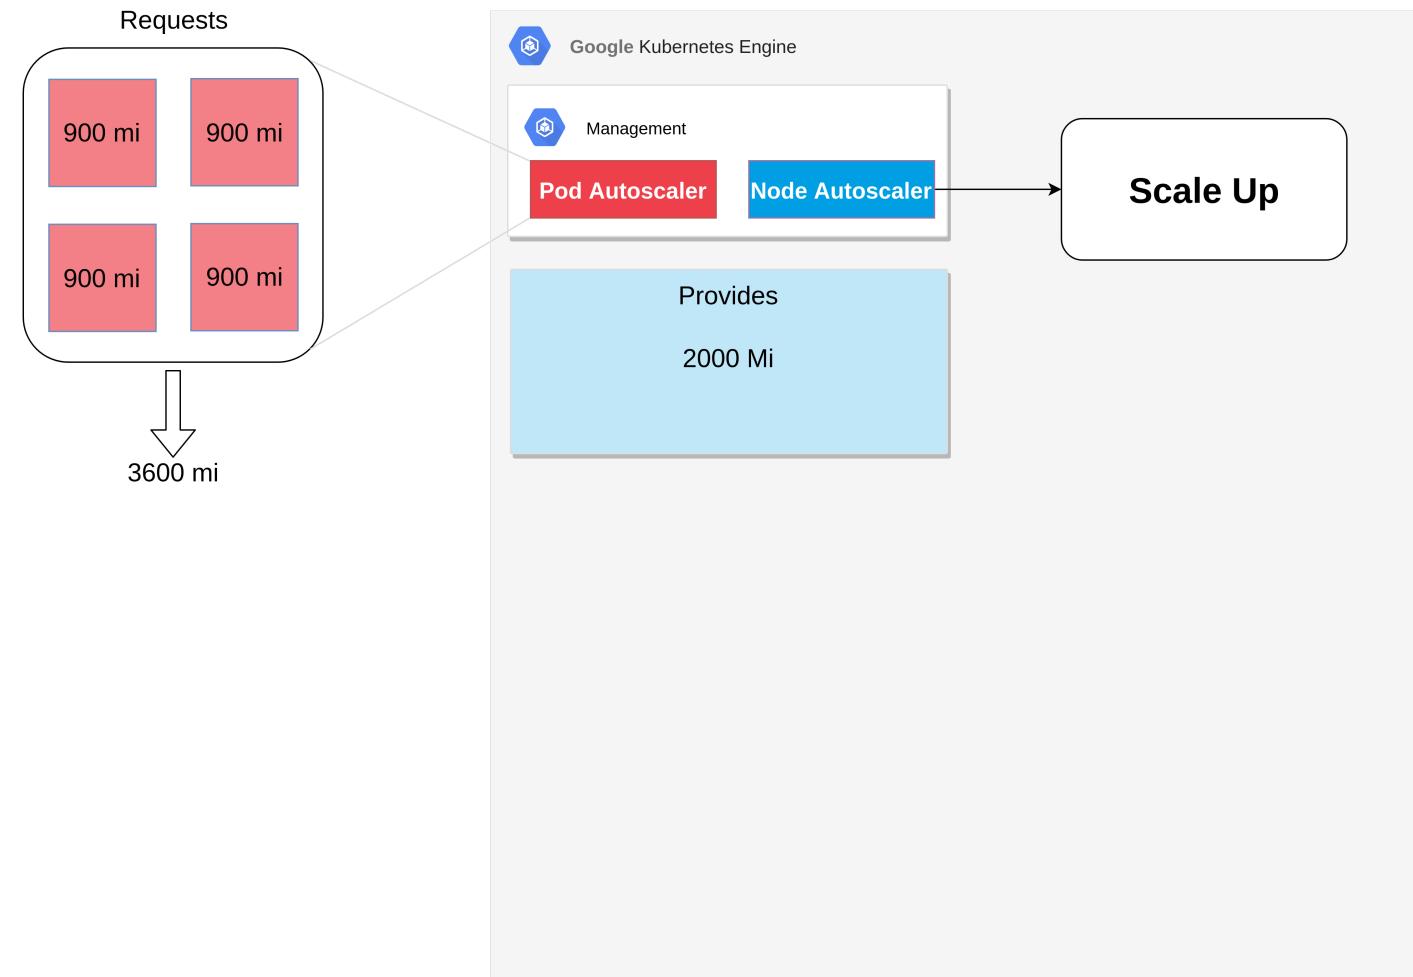

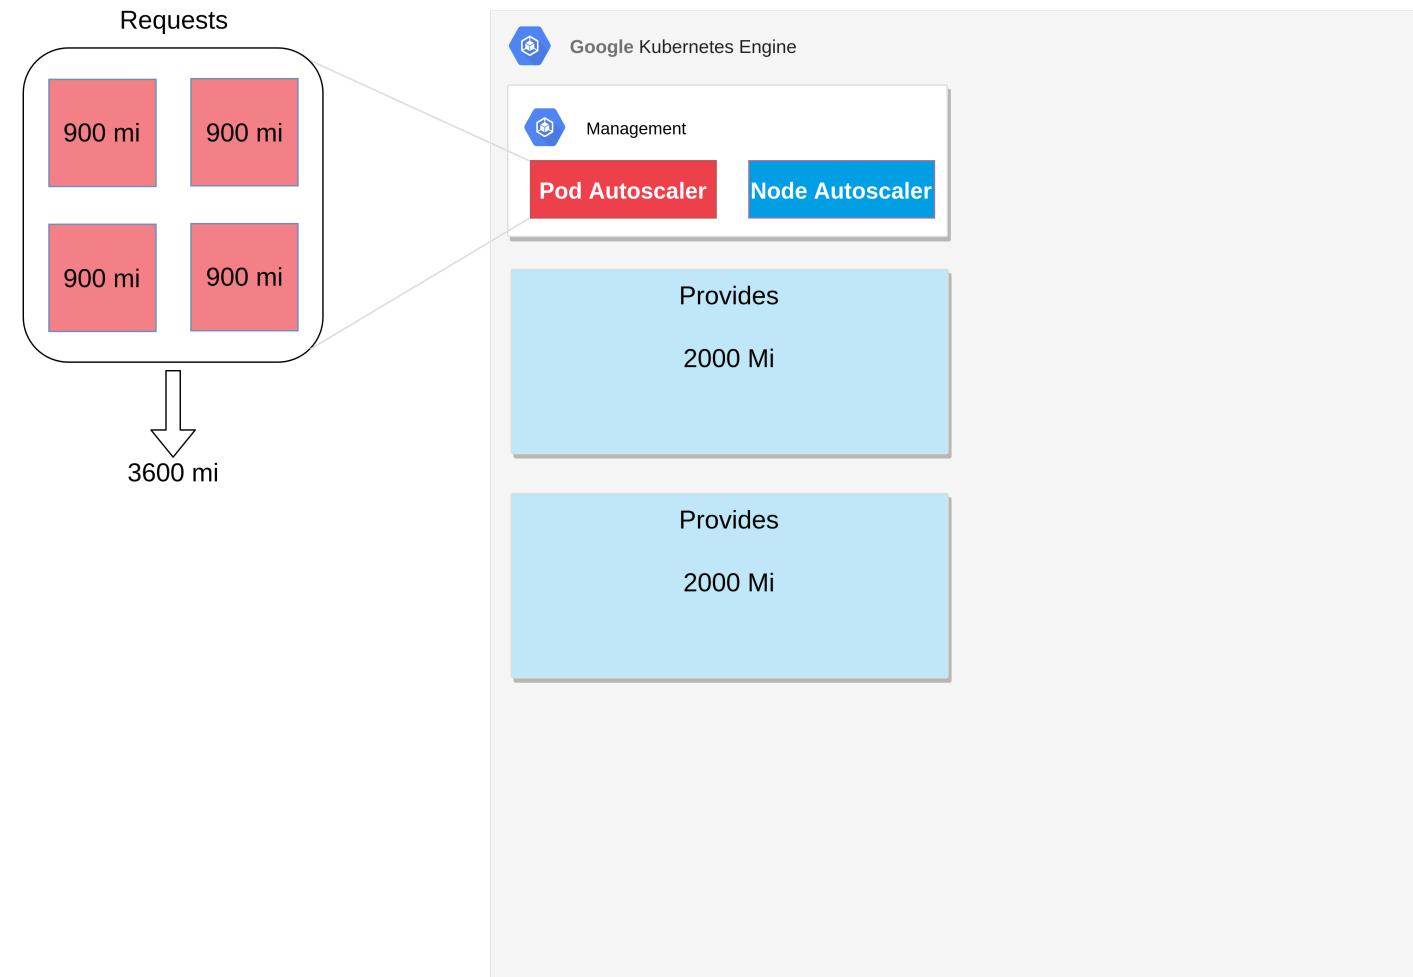

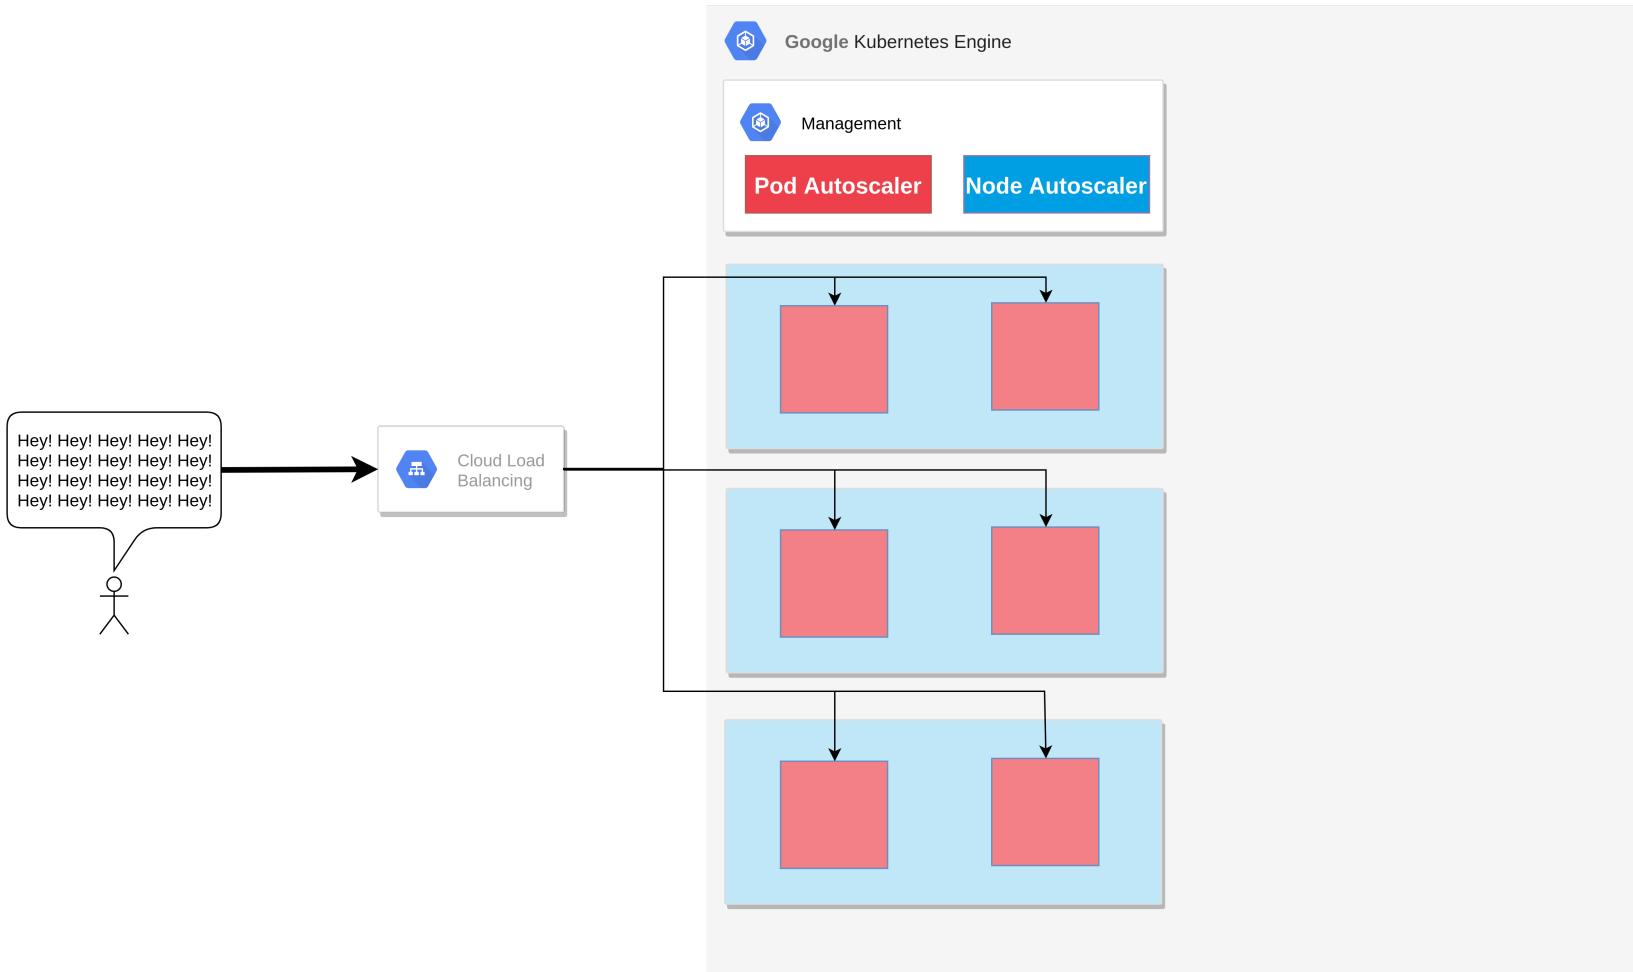

Demo Kubernetes

Part 2

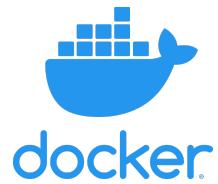

Serverless

- Paradigm shift: There is no infrastructure
- No infrastructure management
- Pay per use
- Stateless

Example Serverless

Container Image

Deployment

Demo Serverless

Takeaways

- Don't do lift and shift
- Cloud providers make scaling easy
